## INTRODUCTION

Welcome to the REVOLUTION!

If you are reading this book, it is likely that you have already read one or more of my previous books, and I thank you for your dedication and support to allow me to present this information. Many people have asked me why it has taken more than 7 months to write this book.

Good question...

I sat down to start work on it after I finished book 4 – Taking on the Banks, and realised that there was no way I could do it, without first taking the time to gather all the equipment and supplies necessary to document everything I was suggesting.

I feel that out of all the books I have written, this one going to be the most valuable. It contains all the information I would like to have had 7 months ago. If you are going to walk the path of a free man, sovereign, or whatever label you want to apply to it and be completely responsible for yourself and your family, then this book will help you to achieve that.

Most things that I write about are based on personal experience, not speculation or hearsay or other people's work, where possible. I have done as much as I can to make it easy for you to follow on from the suggestions and given you the details of processes and systems that we use.

I have been a bit disappointed in that a lot of people who have made a donation toward my research, have done so only because they themselves are in debt and think that I can provide a way out for them, or offer a quick fix.

The information on Banking and the letters and templates I provided were an added bonus to the information in book one. By the time I had written Book Four, Taking on the Banks, I realised that this was not the original intention at all.

The books are intended to be a crash course in exposing the deceptions that are all around us, disguised as conventional society. You have probably heard or experienced the ripple effect that they have caused, which includes most Banks removing their honour/dishonour fees.

What I would like you all to focus on now is not your problems or debts or any negative aspects of your life that you have created or attracted, either consciously or unconsciously. Rather, I encourage you all to focus upon the feelings and experience of freedom, love, respect for nature, appreciation and harmony, every day.

Since moving onto a small farm, we have all experienced a profound change in our everyday lives, and I will be sharing some of that with you in this book, as I believe I have found the key to removing your energy from the system that keeps you enslaved in a limited thought pattern mentality.

I would also like to thank all of you who have supported our research and to those who have made a donation which allows us to do all this work. We greatly appreciate it. In return, and to honour that support, we have, without exception, sent complimentary copies of my research books to every one who has made a donation.

PRISON INDUSTRIAL COMPLEX  
ELITE CONTROLLED DEPOPULATION**

## THE RISE AGAINST THE NEW WORLD ORDER

The subtitle of this book could be somewhat misleading, in that on first reading you might think that it is suggesting a massive uprising and civil war against the world's elite, governments and international bankers.

Although that appears to be happening already on a global scale, what I am really referring to is developing a state of mind and being which is the opposite to tyranny, slavery, usury, genocide, wars, fiat money, control, removal of rights, suppression of information, violence and force. I am talking about a rise in the level of global consciousness and morality toward respect, appreciation and complete self-responsibility.

To do that, we need to remove ourselves and our energy (which it feeds upon) from a restrictive, slavery based man-made system, which in itself is spiralling out of control and headed for implosion and collapse. This is because it no longer fits the evolution of consciousness we are experiencing. It is therefore of vital importance that you focus completely on the future you want, rather than what you see around you, or on the fear which is created and used to control you.

Book three in the series gives you enough information about who and what goes on behind the scenes in the New World Order, but that is not what this book is about. When you realise that being in a positive state excludes the negative aspects, you will comprehend that this is the true opposition to the NWO and it's agendas. Be grateful everyday for being free, safe, strong, healthy, happy and abundant. With that mindset, you will begin to experience that as your reality.

Switch off the television. Stop buying newspapers and start to enjoy and appreciate life the way that nature intends you to. After all it provides everything you need for free, and expects nothing in return except gratitude. It is only man that imposes restrictions.

Now lets reflect for a moment as to why consciousness is shifting by looking at what we can see happening all around us.

What we have seen exposed in the demonstrations during this year's G20 meetings in Canada, is what we have seen and suspected in many peaceful protests around the world, and that is infiltration by provocateurs.

There are several videos going around on Youtube which show police disguised as black block anarchists, hurling bricks and smashing windows and cars in an attempt to disrupt the peaceful demonstrations, to facilitate and justify the use of force.

To combat this and to emphasise the peaceful nature of the intention of the protesters some have been offering flowers to the riot police. Notice the numbers on their helmets, a clear reminder of how the elite who run the world see us.

## THE GLOBAL FINANCIAL CRISIS

The other main issue that we are seeing unfold around us is of course the global financial crisis and sovereign debt defaults, as well as investors fleeing from risky currencies and causing massive ripples in the stock market.

NEWS - Financial Markets

Comment

#### **Wall St sinks on economic alarm**

Published 11:59 PM, 29 Jun 2010 Last update 8:15 AM, 30 Jun 2010

By Chuck Mikolajczak of Reuters

NEW YORK - Investors have fled the US stock market and the S&P 500 tumbled to its lowest level in eight months in a sell-off triggered by a wave of increasing alarm over the global economic outlook.

All but one stock in the S&P 500 ended lower as escalating doubts about the stability of Europe's banks roiled markets once again.

The S&P 500 had tumbled below its 2010 intraday low of 1,040.78 during the session, which analysts said could ignite further declines. The index closed at its lowest level since October 30, breaking its closing low for the year at 1,050.47 - another bearish signal for markets.

"Everybody is talking about 1,040, that it is the do-all, end-all, blow it up, end of the world, blood on the streets level. The market crashes, the S&P goes to 900," US market strategist at Cantor Fitzgerald & Co. in San Francisco, Mark Pado said.

Economically sensitive sectors such as materials, industrials and financials were among the hardest hit.

It's no wonder people are taking to the streets, especially in countries such as Greece, Spain, Portugal and the UK, when they come to the realisation that we have all been conned by the nature of what loans really are, and the exposure of the derivatives market as a ponzi scheme betting on non-existent funds.

A sign of the times. People have discovering the truth about fiat currency and are furious about the fraud that has been perpetrated on every one of us.

## SOVEREIGN DEBT DEFAULTS AND THE EURO

You've all heard the talk and media spin about bailouts and re-structuring debt. Member countries in the EU are not supposed to have a deficit above 3 percent in comparison to its gross domestic product, but here you see Greece at 12.2 percent, and the UK recently announced it was at 12.9 percent.

Japan by comparison has a far worse ratio, however the debt burden is supported by the people of the country and distributed, which up until now has allowed it to keep afloat.

The real problem however in all of this is the root cause. It is a solvency problem, and no amount of re-structuring or bailout money can fix a solvency problem.

What we're seeing throughout the world, as well as in Australia is a decline in every aspect of the economy, including falling share market, devalued dollar and a possible housing bubble burst.

Reports are already in which show that building and home loans have decreased dramatically. The Australia stock market has been falling for days, and our dollar has lost nearly 20 cents against the greenback.

Add to all of this the fact that investors are pulling out of risky currencies (such as the Australian Dollar), which relies upon the rest of the world for its position.

I've also been seeing a number of very large companies such as Elders and Macquarie Group drop in value by as much as 50 percent. There is talk in the UK about the possible collapse of BP because of the massive cost of clean up in the Gulf. BP is the largest company in the UK and it would have far reaching ramifications if it did.

It seems the Euro is headed for disaster, as more countries fall like dominoes on top of the sovereign debt pile. You might think that Australia is immune from all of this but our currency has already taken a dive due to investors dumping our risky dollar.

# Do not shed tears over the inevitable death of the euro

**T**HROUGHOUT its inglorious history the European Union has liked to regard itself as a force for stability. Indeed, the bureaucrats of Brussels frequently argue that the justification for the EU's very existence is its creation of a new era of peace and prosperity after the horrors of two world wars and the Great Depression.

But such boasts have been built on an illusion. Dragged down by toxic debts, broken by its own internal contradictions, Europe now faces its darkest crisis since 1945. As the clouds blacken, the storm has already started to break. The single currency is plunging on the world markets. Several of the EU's member states are now effectively insolvent.

**END OF AN ERA:** The crisis in Greece has been the trigger for the current upheaval in the eurozone

The recovery that followed the bear market was bought and paid for with \$2 trillion in government stimulus and bailout money. Now that money is running out. The economy and stock market are running on fumes and with no new stimulus on the horizon, there's nothing left to keep stocks from plunging.

Despite everything Washington has tried to do, nearly one in four American workers is still struggling to get by with a reduced paycheck or without any income at all.

Consumers are responsible for 70% of all economic activity and consumer confidence is low, with retail sales already plunging. New home sales have dropped by 33%, the biggest decline on record. Foreclosures are increasing and creating new nightmares for the largest banks.

The U.S. states now have a cumulative deficit of \$127.5 billion plus more than \$1 trillion in pension obligations they can't pay. They will have to make massive spending cuts to survive which is sure to lead to even more job losses and impact stock prices.

Gerald Celente at Trends Research is among those who have been warning us about this super storm in the financial world, and is telling us that we are headed for what he calls "The Greatest Depression".

What you must realise is that during the Great Depression, those who were prepared for it, orchestrated it, or were smart enough to see it coming, not only benefitted from it, but reaped massive rewards and lived very comfortably.

Again, how you experience a crisis or revolution is dependant upon your ability to flow with changes, and not remain fixed or stubborn when it comes to options.

If you keep doing things the way you have always done them, you could lose everything. If you choose to ignore the warnings, that is your choice.

## THE 2012 PROPHECY

There are so many theories about 2012 that I've explored and read about, and watched dozens of documentaries on the topic. They are all possible realities that could be experienced. The question however is which one will you choose for yourself?

One possible scenario showing the city of Adelaide underwater, which I suppose is quite possible considering that it is built only a few feet above sea level and for the most part is completely flat.

There is so much information and speculation out there that you can easily get lost in all of it. Some of the researchers such as The Horizon Project suggest that we are about to cross over the galactic plane of the milky way, which is a cyclic event occurring every 26,000 years or so.

The evidence they have provided does support climate and magnetic shifts at periodic times. Both the Mayan Calendar and apparently the I-Ch'ing have a corresponding end date of December 21 2012. However with every ending comes a new beginning. Other theories include the return of planet X or Nibiru, as described in ancient texts, and people often quote Sitchen when they talk of the Anunnaki and Sumerian legends.

You also have possible realities laid out in Roland Emmerich's films such as The Day after Tomorrow and 2012. Interestingly enough, after seeing the projected path of the BP oil spill in the Gulf of Mexico, I wondered if such a scenario might happen, in that it could effect the North Atlantic Current, and therefore our climate and food chain.

What I would like to believe is that we are following a similar timeline to the Evolution of Consciousness that Ian Xel Lungold (RIP) so clearly laid out for us in his translation of the Mayan Calendar.

If he is correct, then we are on course to experience a vast shift in our reality toward an era of enlightenment, and a golden age. That is what I am focusing upon as my intended reality.

I have always been a practical thinker, and I believe that it is foolish not to be prepared for unexpected events and situations that can occur at any time. Mother Nature is a powerful force that can unleash catastrophic earthquakes, volcanos, hurricanes, floods, mudslides, sinkholes and other natural disasters at any time.

With that in mind, and the need to move away from reliance upon the system for survival, I have brought you as much information as is available to me at the moment to assist your move toward self-sustainability.

A massive sinkhole that swallowed a whole building recently.

In the past few months we've seen an extraordinary rise in the frequency of earthquakes, violent storms, mudslides and other natural disasters. I've been amazed at the number of 6.0+ quakes we've seen around the world, even here in Australia which is quite rare.

We recently had a large tremor in Adelaide, and one in Western Australia which seems to indicate that there are big changes going on in the Earth or in it's magnetic field.

Whatever the reason, and taking into consideration all that is going on around us right now, I have put together some practical information that will help you to prepare for whatever might happen between now and 2012.

As I have chosen to place my family's future first, I have had to let go of many familiar things such as career and indulgent entertainment, in favour of investing everything we have into sustainable energy, useful assets, guaranteed food and water supply and real money. It is because of that commitment that I am able to bring you this book, and I hope that you find it of benefit.

## REAL MONEY VS FIAT DEBT NOTES

Over the past two years we have warned people about what was unfolding, and urged them to take their money out of the banks in favour of real money. Gold and silver are the best bet in such an uncertain economic climate and the examples above include .999 pure one ounce and five gold bullion bars and collectable coins such as the Krugerrand and Canadian Maple Leaf.

Silver can be purchased easily in one and two kilo bars. I would suggest buying a fireproof/waterproof safe box such as this one (approx \$100 from Bunnings) and burying the box somewhere that no-one can find it. What might happen if we have a depression or financial collapse, is that the housing market will collapse, sending prices back to the early 1980's, the dollar will collapse and as a response gold prices could soar to between \$2000 and \$5000 an ounce.

If that happens, and you have (for example) swapped all your savings for \$50,000 in gold and silver, instead of losing all that worthless fiat money to you will instead have \$150-\$500,000 in real money, and a grossly overpriced \$400,000 home will return to an affordable price of around \$80,000. Looking back at this article I included in one of my previous books, you can see that this forecast has only been postponed slightly by the bailouts, which instead of fixing the problem, have only piled more upon it.

### **Only gold glitters in gloom**

THERE is a saying in the investment world that the best buying opportunities are when people are gloomiest.

A statement by New York-based Trends Research Institute last week could not be more gloomy.

That said the U.S. already was in "The Greatest Depression".

Director Gerald Celente said global financial markets were collapsing and

all those who hoped for a speedy recovery were wrong. "There will be no turnaround in the second quarter of 2009 or 2010 or 2011. America and much of the world has entered The Greatest Depression," he said.

"There is no stock market bottom in sight." On a brighter note, he forecast the gold price to more than double to \$US2000 an ounce.

## EMERGENCY POWER

For emergency power, we have a couple of systems set up. The first one is a RITAR 200AmpHour sealed Battery (which cost us \$730 from Ebay) coupled to a 2400Watt Pure Sine Wave Inverter. We can recharge it either with a conventional battery charger when there is grid power, or off grid via our solar panels or wind generator.

I recommend using an isolation switch on the positive cable to save having to couple the leads up to the battery all the time. This one was \$49 from Battery World.

We also bought heavy-duty battery cables from an Auto Shop to connect the battery to the Inverter and set the whole unit up on a sturdy plywood base with castors for ease of mobility.

This battery is one of the best on the market, and weighs about 65kgs, so takes two people to pick up. The Inverter was also purchased from Ebay and cost \$200 which included delivery, which is very cheap. Battery World sells a 2000 Watt Inverter for around \$599.00 by comparison.

The Inverter has three A/C power outlets at one end, and large screw terminals at the other end for connecting the leads. If you are using car battery leads with brass lugs (you cannot use the ones with clamps) then you will probably need to drill the hole slightly larger as I did, to fit onto the Inverter's terminals.

Make sure to use a vice to hold the end of the lug steady rather than trying to hold onto it with your foot or hand. Do not clamp the lead in the vice as you could damage it.

When I first started experimenting with Inverters and Batteries, I bought a 500Watt model, but soon found that it was pretty useless, except in emergencies.

In the following image you can see it hooked up to a car battery and an angle grinder. The problem is that the grinder draws 540 watts, and you notice the difference in power immediately.

Instead of instantly cranking up to speed, the grinder winds it way up to speed from a slow start, as it's pulling more juice than the Inverter is rated at. This will not do the Inverter any good either.

The 500W unit works fine for small electrical items that don't draw as much power, so I would suggest that before you purchase any battery or Inverter, to make a note of the wattage of the items you want to run on it, especially large items such as fridges. I would say when it comes to Inverters, it's best to buy the biggest one you can afford.

## 12 VOLT LIGHTING

To minimise power consumption, you can set up a very simple 12 volt lighting system using fluoro lamps that you can buy from Cheap as Chips for \$12 each (at the time of this writing)

I tested two of these lights, which was enough to illuminate my garage, using an old car battery that hadn't been charged up properly. The lights ran constantly for almost 3 days and nights. I estimated that I could run them for approx 2 weeks using them only at night time, if the battery was fully charged.

You should also consider storing a number of handy items such as church candles, matches, firelighters, firesteels, windup and solar powered torches, CB radio, AM/FM radio, power tools and hand tools, hand saw etc. These will all become essential things if there is an economic collapse. I recall my father saying that they survived the Great Depression by running along after the trains and collecting the coal for heating.

## BACKUP GENERATORS

This is our own personal backup generator. It's a 4.2kva (Kilo-Volt Amp) and will pretty much run the whole house including the fridge in times of blackouts and power cuts.

We paid around \$700 for this one brand new, and the good thing about this one is that it can be started in several ways. It has a conventional cable pull-start, a key start (if the on-board battery is charged), a remote control starter, plus it has the ability to be jump started from a car battery. Once running it will charge up the on-board battery.

You can buy generators like these from Ebay, and they can be delivered to your door. This particular model was chosen because it's a "pure sine wave" generator, which means that the output voltage doesn't fluctuate like modified sine wave generators, allowing you to run sensitive equipment such as computers.

A generator like this is able to generate electricity because it uses fuel to power a petrol motor, which in simple terms turns a coil of wire inside a set of magnets creating 12 volts, which is fed through a sine wave inverter, turning it into useable 240 volt A/C power.

The basis of most free energy research of course is to try and generate this same effect using magnets and coils without the need for the petrol engine as the motivating force. I will expand upon this in the section of Free Energy Possibilities and discuss what I have learned about magnet motors over the past five years.

A lot of engines run without a battery, by generating their own electricity for the spark from the coil such as a lawnmower or small pull-start motorcycle.

The end panel of this model has two outlets for 240 volt power supply, a 12 volt DC input for jump starting the generator's motor from a car battery, and a key starter, along with on/off switches and choke for the motor. In the movie "I am Legend", Will Smith has a number of Honda Generators in his kitchen. Not only would that have been extremely noisy, but he would have needed to run exhaust pipes to the outside of the building. NB: We had 130km per hour winds here in Adelaide last night and 60,000 homes are without power this morning. I wonder how many had backup generators?

Most generators run on regular unleaded petrol, and we always make sure we have at least 60 litres of fuel around the house.

You can buy a 20 litre plastic fuel containers like these from discount stores such as “Cheap as Chips” or Auto shops like “Supa Cheap Auto” for around \$25-30 each.

Now, although some models are called “silent” generators, don’t be fooled into thinking they don’t make any noise. All generators make noise, a bit like a muffled lawnmower, and all of them have exhaust emissions, so you cannot have them running inside your house for obvious reasons.

We set ours up in the garage with an exhaust outlet, or you could build a custom enclosure for one as long as it was waterproof and provided an outlet for the exhaust fumes.

One way I have heard to connect the generator to your home is to use a double ended extension cord. This would mean wiring two male plugs, one to each end of the cable, but this is highly dangerous and illegal.

Remember the output is 240 volt, and the reason an extension cord is female on the ends, and does not have exposed pins is so you do not electrocute anyone or start a fire. You would be much better off connecting a caravan style plug to your home, which has a waterproof cover over it, and make sure it has it's own isolation switch.

When the power goes out, you simply switch off the power at the supply, start up your generator, connect the generator to the house's electrical system via an exterior wall plug, and switch it on. The house would then be running on generator power instead of the meter supply, and you should have power at every outlet in the house.

## SOLAR POWER

For less than \$50 you can buy a small solar battery charger such as this one. It's good for experimenting and small applications, and will charge up a 12 volt car battery. Of course, if you want to generate serious power from the sun, or from the wind, you will need a larger system.

This pair of fold-out solar panels cost us around \$750 and generates 240 watts of power. This one is approx 1500mm sq.

The rear of the solar panels comes complete with all the wiring that you'll need and includes a charge controller so that you can hook it up directly to a battery or series of batteries without the danger of over-charging.

This model can be used for camping, emergency power or mounted permanently as a regular power source.

## SOLAR HOT WATER

I was always under the impression that solar hot water heaters were a solar panel, however once I started researching; I soon discovered that you could build your own solar heater such as these boilers, quite easily.

A solar hot water system generally does not use solar panels that are used to generate electricity. Instead it works by heating a series of tubes beneath the glass that the water travels through. Cold water from the storage tank (either horizontal or vertically arranged) flows naturally downwards to the bottom of the tank, (just as hot air rises, so does hot water).

The cold water enters the heating unit at the bottom, and as it begins to heat up from the sun's rays, it rises up the tubes and is fed back into the top of the tank.

New cold water is introduced as needed into the bottom of the tank from the water supply.

We also bought several long lengths of black multi-tube strips, which are often used to heat swimming pools. The water travels down the small tubes and is heated by the absorption of heat through the black rubber.

## WIND TURBINES

There are two main types of wind turbines; the first is the traditional pole or frame mounted horizontal style as seen in the outback with multiple blades, or the newer three-blade style, which we have.

We purchased ours in kit form from JAYCAR, which requires assembly and the ability to wire it up yourself. You will need to install a long vertical pole to mount the unit on, as well as running support cables down to the ground.

Large versions of these are used for Wind Farms and have considerable vibration and noise problems, which has caused health concerns. People who live near these gigantic machines, which are big enough to land a helicopter on the motor unit, complain of not being able to sleep at night from the subsonic vibrations.

The other type is the VAWT or Vertical Axis Wind Turbine. These are becoming more popular as they can be installed anywhere, spin at a lesser volume of wind speed, and seem to generate much less noise. They also catch the wind from all directions without needing a tailfin.

You don't necessarily need to mount a VAWT on a pole, as I have seen them operate at ground level or mounted on rooftops.

It's a good idea to incorporate both systems of solar and wind, because naturally there is no sun at night, but there could be very strong winds, and on days when there is no wind, it's likely there will be sun to keep the batteries charged.

The more batteries you have, and the larger they are, the better. You can hook batteries up either in series or parallel, which means either increasing the amps, or increasing the voltage. Hooking up two 12V batteries with their positive ends along one side and negative on the other, remains as a 12V output but doubles the capacity.

Hooking up two 12V batteries by running positive to negative, negative to positive creates 24V at the same Amperage. For solar and wind power, you'll need to stay with 12V output and increase the storage capacity (thereby increasing Amp Hours).

### FREE ENERGY POSSIBILITIES

There are two options that most people experimenting with the notion of generating free energy come to explore. One is magnetic shielding, which is the attempt to find a method or material that will shield one of the magnetic poles of a magnet, and the other is the rotation of the magnetic field.

Both of these ideas are attempts to get away from the "cogging" action that occurs when one magnet comes into proximity with another magnet, as it tries to pass it by. The ideal situation of course, that would produce free energy for everyone, is if a magnet consisted of only one pole, thereby having no braking effect when a magnet of similar polarity passes it.

Of course, magnets have two oppositely charged poles, and therein lies the problem, and the reason that most if not all magnet motors simply do not work. Therefore I would not waste your money on any of the downloadable PDF "Free Energy Plans".

The usual experiment is to set up a series of magnets around a circular disk or wheel, and then try to motivate it by holding another magnet nearby. This works only if you push the magnet in and out at the correct timing, behind the magnet that has just passed with the same pole, and not in front of it. This has a push-push effect, a kind of pulsing, as you are taking away the conflicting magnetic field momentarily to allow the magnet to pass by.

Naturally, you're not going to sit there all day and wave your hand up and down to get a piece of wood or aluminium with magnets attached to it to spin, you want this thing to do it all by itself, with a great deal of torque (rotational power) so that it can be hooked up via V-belt or shaft to a generator, replacing the petrol engine as the motivator.

Fig.1

It is generally accepted that there is no such thing as perpetual motion, due to the law of physics, however a couple of years ago I managed to create the effect in a simplified way. I realised that when two objects, in this case for example a wheel with magnets, and a rotating outer magnet, come together; you have no motion at all. You have equal and opposite opposing forces that cancel each other out, or stabilise each other, with equal push and pull. There has to be one fixed magnetic force as the motivator, and a series of magnets as the moving part. I suspended one magnet on a uni-directional pendulum above a larger magnet. What I found was that this would keep going for days without stopping, at the same rate of speed.

I observed what I have termed "surfing" of the magnetic waves by the magnet on the pendulum, as it appeared to follow the path of the magnetic field, not a circle, but a kind of cloverleaf pattern, the same as you get when using iron filings to see the lines of force.

The magnetic field is in constant motion, moving from north to south, which is what I believe propelled the experiment. The problem was that the speed was not great, and there was not enough torque (rotational power) to drive a generator.

## THE HOWARD JOHNSON MOTOR

AN S&M SPECIAL

# Amazing Magnet-Powered Motor

by Jorma Hyypia

In this rendering of Howard Johnson's magnet motor the Stator magnets provide the repulsion force to the Armature magnets which are attached to a rotating drum. As drum spins it drives a belt attached to a conventional generator. The generator provides electrical power. The magnet motor runs on its own.

I think that Howard Johnson might have discovered that using long stator magnets, orientated horizontally across his motor allowed him to access what I call the "in-between" zone, which is half way between the North and South poles.

In the diagram you can see the stator magnets running horizontally as opposed to the armature magnets, which are at 90 degrees to them, which are curved.

Most people working on magnet motors seem to use small cylinder or cube magnets that have very little space between the poles, and also orient them with one pole directly facing out.

Perhaps this is one of the reasons they don't work, as it is creating a kind of irresistible force meets immovable object situation. This middle area of the bar magnets could be a sort of neutral zone which has a lower cogging effect.

Here you can see that the magnetic field of a magnet is not round, and not static. The Earth operates in the same way, with the North magnetic pole being at the South Geographical Pole and vice versa.

I'm about to order some new magnets to experiment with this concept, and if you are considering doing the same I recommend using Neodymium, as the magnets are extremely powerful, as opposed to Alnico.

A word of warning however to those of you who have had no experience in handling strong magnets, as they can be very dangerous in several ways.

The attractive power of some of these relatively small magnets (for example 2cm diameter by 1cm) is incredible. I have not seen anyone yet that is able to separate two of them by hand if they become stuck together.

They will shoot across a table if placed closer than about one metre apart and smash together.

They will cause very nasty blood blisters (I've had several myself) simply by accidentally snapping together if you happen to forget you have one in each hand.

My father put one in his palm, and one on the back of his hand and was complaining about the pressure, so he turned his hand slightly, and before I could warn him the two magnets snapped together catching the skin on the edge of his hand between the two.

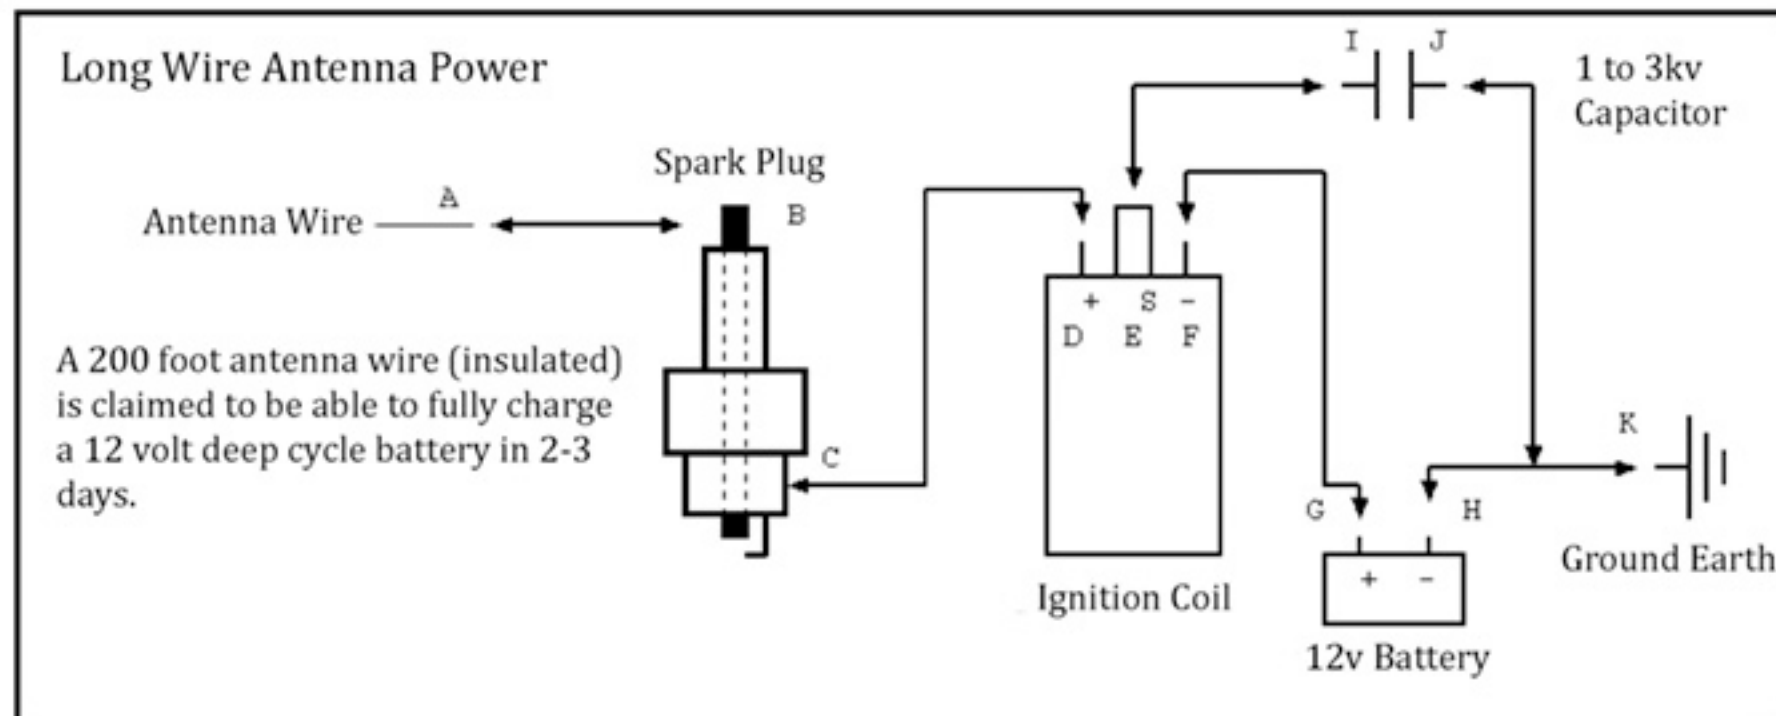

It took us about a minute to lever them off, and sure enough he had a nasty blood blister. I've walked past a car before with one in my pocket, and my trousers have suddenly jerked sideways and attached themselves to the door.

If there was glass between two magnets or between a magnet and a piece of metal, it would explode with the force of the impact.

Magnets will erase cassette tapes, computer hard drives and memory sticks, as well as damage or erase the magnetic strip on your credit or bank card.

They will also damage television screens and computer monitors, so please handle them with extreme caution.

## LONGWIRE ANTENNAS

Ham radio operators know that there is a dangerous build up of electricity in long wire antennas, as well does the electricity companies with their overhead power lines. That is why they are terminated and use non-shielded wire. Energy is built up inside wire which is non-terminated and properly shielded.

As such a long wire is needed to store the static electricity in the air, it would make sense to create a frame and wind the wire around leaving space between the wires. This is something we can start to experiment with now that we have a larger property.

The following article shows that it is indeed possible and therefore has always intrigued me as a viable means to generate electricity freely from the atmosphere.

## GETS ELECTRICITY FROM AIR

Spanish Inventor Lights Bulbs at  
600 Yards' Distance.

By Marconi Transatlantic Wireless Tele-  
graph to The New York Times.

LONDON, Monday, April 6.—According to the Madrid correspondent of The Daily Telegraph, an experiment has just been carried out at Pozuelo, near Madrid, which demonstrates the possibility of extracting electricity from the atmosphere for commercial purposes.

José Yglesias, who recently caused the explosion of dynamite mines by means of infra-red rays, on Saturday succeeded in drawing electricity from the air by antennae mounted in pairs on a wooden tower thirty-three feet high, erected on a high hill.

His apparatus received the electricity at a pressure of 6,000 volts, which was transformed down to 150 volts. Fifteen electric lamps in a house 600 yards away were easily lighted and maintained at full pressure during a prolonged test.

The experimental apparatus of Señor Yglesias is very simple in character, the whole having been constructed inside of a fortnight. The experiments will be continued, with the object of ascertaining the full capacity of the installation.

Señor Yglesias says he can obtain directly from the atmosphere enormous quantities of electricity at will, according to the arrangement of the installation.

Among the persons who witnessed the experiments were Count Maceda and others in the immediate entourage of King Alfonso, who were specially sent by the monarch to watch the tests.

## THE TESTATIKA

In the mountains of Switzerland there lies a small village called Linden, where a group called the Methernitha live. They have become well known for their Testatika machine, which was built by its founder Paul Baumann.

The machine attracts many people from all over the world, interested in the production of free energy. If the machine really works, it would be the answer to the world's energy needs, but no one outside of the Methernitha group knows exactly how it works. Although the Methernitha people have demonstrated their machine to many scientists, the mystery of its operation remains a secret. This is the best description that I could find of the theory behind its function.

*"Two counter-rotating discs generate an electrostatic charge. One disc represents the earth, the other the clouds. The charges are bound using grid electrodes. After that, they are collected by non-contacting so-called "antenna keys," and then sorted.*

*After being initially turned on by hand, the discs rotate by themselves according to the electrostatic laws of attraction and repulsion. A rectifying diode keeps the cycles in a steady state. Otherwise, the impulses of attraction and repulsion would accumulate and cause the discs to run faster and faster — the correct speed is of great importance. For optimal power generation, the discs have to run quite steady and slow.*

*By means of grid condensers, the energy is stored and then uniformly discharged, at the same time reducing the high voltage and building up power with additional devices. Finally, the machine supplies a uniform direct current, which varies according to the size of the model.*

*It furnishes about 3-4 kW permanent output, depending on humidity, whereby the electric potential ranges from 270 to 320 volts.*

*High humidity of the atmosphere prevents the build-up of electric potential, so the drier the air, the better. No doubt, through the so-far-achieved results, one main objective has been reached, namely, to prove that it is possible to use free energy."*

## THE BEDINI MOTOR

I have a very interesting DVD called "Energy from the Vacuum" which explores the pulsed motors of John Bedini.

The problem I discussed earlier is that magnets have two opposing poles, so in order to utilise only one pole as the motivator in a generator requires either shielding of one pole or rotation of the magnetic field.

The Bedini motor uses an array of electromagnets as the motivators, switching them on and off at timed intervals through a circuit. This is the push-push effect that I was explaining, however it requires a constant input of electricity (energy) to create the electromagnetic field via coils of wire.

What Bedini is saying is that it is possible to keep the flow of energy going once it is started, by switching part of it, splitting it and returning that portion (in itself a motivator), then removing the original source.

Here you can see his workshop set up with one of the pulsed magnetic motors alongside a large battery bank and lighting grid which he uses to demonstrate and test the equipment.

## THE PERENDEV MOTOR

## Perendev magnet motor inventor arrested for embezzlement

*After declaring bankruptcy in Germany, Mike Brady rented a house at Lake Zurich in Switzerland and leased a fleet of Maserati and several Range Rovers. He was arrested on March 29 and extradited to Germany where 61 customers wanted their money back (\$1 million Euros) for non-delivered 100 and 300-kw electromagnetic motors. Patent pirated?*

This appears to be another unfortunate case of people raising funds through shares or investments and promising to deliver a machine that either does not work, works for only a short period of time, or using a design they have appropriated from someone else. If Tesla were still alive, I have no doubt that he would have solved the problem.

I have watched all the "working" demonstrations and replication attempts of the Perendev motor, as well as literally hundreds of other free energy magnet motors and although I am myself a magnet motor and free energy researcher and experimenter, I know the same set of physics applies to the concept of over unity.

There must be a solution to the problem out there somewhere, but the more people that make claims and then do not deliver will only have the effect of turning the sceptics and scientific world, as well as the hungry media machine against anyone experimenting in this field.

## LUTEC AUSTRALIA

The following information is the description and claims made by LUTEC AUSTRALIA.

In order to gain an understanding of the operation of a LEA (Lutec Electricity Amplifier) it must be understood that there are actually three separate and completely individual events occurring in the one machine. Each of the three is equally important because without one of them operating in a completely synchronistical manner with the others, the end result would not achieve the efficiency levels required.

Each of the three events should first be viewed in isolation and then when they are drawn together as they are in the LEA, an understanding of the operating principles will become clear.

The *First Event* is a Pulsed DC Motor.

The *Second Event* is an AC generator.

The *Third Event* is the result of the impact of the Second on the First.

### **THE FIRST EVENT: A Pulsed DC Motor.**

A DC input current either from a battery bank or from rectified AC mains is supplied to a DC motor comprised in this case of four fixed position stator coils, and a rotor with four equally spaced imbedded rare earth permanent magnets of a particular strength.

The input is pulsed by a rotating switch (commutated) allowing the DC input current to flow through the motor coils for a percentage of one cycle as dictated by the actual ON period of the commutator contacts. In most cases this is around 0.2 of a cycle. The electron flow in this DC circuit is negative to positive and so the negative lead is permanently connected to the coil/s.

The DC pulse causes a magnetic effect in the coil core so that the temporary polarisation of the coils laminated steel core has the effect of repulsing the magnetically aligned permanent magnet embedded in the rotor so causing it to rotate.

# Free Energy? Not from Lutec

**The lure of “free energy” is very seductive. Ian Bryce investigates the Lutec scheme and exposes its flawed claims.**

*Ian Bryce is an engineer and scientist working in the commercial satellite launching industry. He is a member of the Australian Skeptics Committee.*

Energy production is the mainstay of our affluent lifestyle, and possibly the undoing of our planet's climate. Its economic importance is gargantuan. Energy itself is invisible to the eye, but its behaviour is governed by laws of nature that have been known for hundreds of years.

Not surprising then, that a good fraction of the world's scientifically literate people are involved in the production, conversion, storage, distribution, and sales of energy. Little wonder also, that it attracts many not encumbered by such knowledge or scruples.

Most of us know that you can't get money out of thin air. A stack of 20 coins in a sealed jar stays at 20, it does not grow to 25 overnight. In physics classes, our school-children learn that it is the same with energy. You can convert it between forms, say from chemical in fuel to heat inside an engine to mechanical at the wheels of your car, but the total never goes up.

Despite this, we see an endless procession of devices claimed to overcome such inconvenient facts, such as energy polarizers which double your car's mileage, and over-unity generators which enable you to sell power back to the grid.

Why are we regularly faced with people claiming these impossible machines? Clearly because of their enormous economic potential. To

those who actually believe their machine works, the playing field is the world's energy economy. To the many who don't, it is the money of buyers and investors.

In the USA, there is a long history of such scamsters travelling around showing their machines to church groups, elderly people's clubs etc. US Skeptical investigator Eric Krieg has many listed on his site at:

[www.phact.org/e/dennis4.html](http://www.phact.org/e/dennis4.html). Scamsters typically build a complex machine, take some bogus measurements, and say it will solve the energy crisis and make investors rich. Sadly, it is often the underprivileged and uneducated who offer their savings.

## The Lutec machine

Here in Australia, we have been investigating two people from Queensland who are attracting worldwide interest and investment for their "Lutec" Free Energy machine. It is claimed to be able power your house and you can sell surplus energy back to the grid, thus solving the world's energy crisis.

In researching for this article, I contacted interested parties and experts. These include:

- John Christie and Lou Brits, the free energy machine inventors;
- Cliff Carew, Patent Attorney, who drafted the patent;
- Vivienne Thoms, Australian Patent Commissioner;

I have included the front page of an article from Ian Bryce. The whole article and photographs of the Lutec machines and claims can be found on the Internet along with interviews on Youtube.

Apparently Lutec have been reported to ASIC for using other people's designs or improper fundraising. I wonder however if this pattern of suppressing new inventions is an organised media spin and character assassination to prevent their dissemination?

## WATER FILTRATION

Everyone should consider the possibility that the next major world crisis could be lack of water. We don't consider the possibility much here in Australia or other developed countries, simply because we've never really been without it.

We considered many units, including the Wellness Filter and the Humidity water generator, which converts the moisture in the air to water.

This unit was relatively easy to set up under the sink, and only required two holes to be drilled. One for the Fawcett, which sits on the sink, and the other just above the S-bend to allow for waste to flow to the drain.

All the tubes are colour coded for ease of recognition as to where they go and to make it easy when replacing filters.

The other reason for choosing a suitable water filter is of course toxic chemicals such as Fluoride being added to the water supply, which is why we chose a Reverse Osmosis (RO) unit.

The RO unit is the only one which will remove Fluoride from the water, and that was our primary objective. Whatever minerals are lost in the filtration process, or as with the humidity unit the lack of any minerals, can be addressed by adding supplemental minerals or other colloids.

Do not make the mistake of believing the Government and Dental Association's claims that Fluoride is safe for you and your children to use. It is a known toxic chemical and by-product that has been used extensively in pest control and other industries.

It is also accumulative by nature, which means that small doses over a long period will build up in your system. Fluoride is a by product of Aluminium production and I know of at least one confirmed infant death in Queensland due to it's consumption.

## THE GREAT WATER METER SWINDLE

A friend of mine called me out to his property one day to have a look at his water meter. He had accidentally damaged the plastic outer casing, causing a split in it.

What happened next, was a bit of a surprise.

Now I'm not sure how many of you have this type of meter installed, but I was amazed by what actually goes on inside this one.

When he lifted the plastic cap off and extracted the central meter unit, I was expecting there to be a connecting rod, socket, cog or other attachment that connects the meter to the housing. No such thing. The meter unit was a fully enclosed, self-contained unit, completely water tight with no extruding parts that interface with the metal casing it came out of.

I looked inside to see what was in there, and it was completely empty. It was like looking into a metal bowl, completely smooth and void of any kind of protrusion or fitting.

My friend said that he had become suspicious of the accuracy of the meter when he was filling a large tank with water. He claimed that the meter would spin wildly out of control, too fast to see the numbers, then would "splutter" and almost stop, then shudder and pick up speed again.

Definitely not a constant motion or uniform speed, which he thought could mean the pipes were blocked. He had turned off the tap and was trying to undo the large nuts either side of the meter when he damaged the plastic casing.

I held the unit in my hand for a moment, and wondered how this could possibly work, and then suddenly realised it must work by magnetism, the same way that electricity meters work. I turned it over, and sure enough, in the bottom, there was a small round magnetic disk. I went to the shed and brought out an electric drill. In the chuck, I placed a small magnet from my son's play set, and offset it using a hex-bit.

When I placed it about 1cm away from the meter unit, and switched it on, sure enough the meter started to rotate. Hardly what I would call an accurate measure of how many litres of water you are actually using, don't you think? No wonder it was behaving erratically. I suggest that you all conduct tests of your meters by filling several 4-litre containers and monitoring the actual meter reading. It's possible there are other water meters with more accurate means of measuring consumption, but this is not one of them.

## ELECTRICITY METERING

The Wattmeter is electromechanical in nature in that it uses an aluminium disc acted upon by two coils. One coil is positioned in such a way as to produce a magnetic flux in proportion to the voltage on the disc and the other coil produces a magnetic flux proportional to the current.

This causes the disc to rotate at a speed proportional to the power (voltage times current) being used. A permanent magnet is also installed in such a way as to exert an opposing force in proportion to the rotating speed of the disc.

This causes the disc to slow down and stop when energy stops being used. The aluminium disc is also attached to a worm gear, which drives the register. Here again you can see the use of magnets to control metering devices.

Figure 5. Magnetic shunt method of adjusting speed of disk.

If you are considering installing one of the government rebate solar systems, you will likely have a new meter installed, as these older models are not designed to run backwards. Excess power from the solar panels is fed back into the grid connect system and you are credited with the input on your electricity bill.

## LONG TERM FOOD STORAGE

The IceKool chest that we purchased was the largest they had in stock, and cost us \$450 from a hardware store. It is 1350L X 485W X 550H and has 200 litres capacity. The suggested retail on their website is \$535 so we got a bargain.

The long tube to the left in the previous picture is a “cache” tube, which can be used for burying items and storing them underground.

## FOOD STOCK

When choosing food for long-term storage, it is important to find products with an expiry date of at least two years forward. A useful tip that was passed on to me by a Woolworths manager, is that any product without an expiry date is good for at least three years.

This is a small selection of items from our extensive stock supply and includes the following items:

Spam (Traditional and Turkey), tinned fruit, tinned potatoes, raw sugar, quick oats, condensed milk, canned tuna, Sustagen powder, canned soup, bags of rice, cooking salt, tinned puddings, tea, coffee, drinking chocolate, Nesquik, breakfast cereal, cooking oil, soy sauce, ABC sauce, cracker biscuits, two minute noodles, canned vegetables, baking powder, rice snacks, lentils, maple syrup, tinned jam, cling wrap, foil wrap and freezer bags as well as spring water.

With any long-term food storage it's important to regularly rotate the supply, so that for example, when you've had your stock for 6 months, check the expiry dates and remove the oldest stock and replace it with new ones. This way you're always keeping your stock within the expiry dates and not risking any food poisoning from spoiling.

If you have a basement or wine cellar, then that would be the best place to store your food cache, especially during the summer, otherwise you could bury it in sealed drums.

These 20 litre food grade tubs can be purchased from a number of places, but the cheapest option we found was to ask at a local takeaway food shop. In Adelaide there is a food chain called Barnacle Bills, which use these tubs for things such as mayonnaise, and always have plenty of spare ones that they will clean for you.

We picked up 10 of them for \$5 each and they looked brand new. All I did was give them a thorough clean and peel off the stickers.

Once you have chosen which kind of bulk food you would like to stock, and filled your containers, it is a good idea to purchase some desiccant (silica moisture absorbers) packets and place one or two inside each lid before closing.

These containers seal very well, which means no small insects can get in to your food.

I found out that the best things to store long term are white flour and white rice, although most people prefer rye, wholemeal, brown or other types of grain, only the white will last as it has had all the oils removed.

It is the oils in the other types that will go rancid, thereby spoiling your stock, so it's best to choose products that will last.

As you can see in the photo, we've stored crusty white flour (plain, as yeast will spoil) white rice, quick oats and raw sugar. Obviously lighter products such as oats will only fit 10kgs into a 20 litre tub, whereas the raw sugar will store 20ks.

Keep in mind that in the summer months, plastic containers and packets that are exposed to heat might build up moisture inside if not kept in a cool dry place such as a basement, cupboard or in a large Esky such as the IceKool described here that we use.

The choice of what to stock is entirely up to you, and only dependant on your budget, tastes, storage space and availability.

To work out how much food and other expendables you and your family would need for a 12 month period of self sufficiency, you would multiply the number of people in your house by three, to give you the number of meals needed for one day, then multiply that by 365 (1095 meals). The same goes for things such as toilet paper. If your family uses one roll every two days, then you'll need to stock 183 rolls.

I would also recommend a good stock of herbs and spices for cooking, especially if you have a large stock supply of things like rice or pasta, as you'll need to make sauces and seasoning. Make sure to keep Baking Powder for things such as cakes etc, and dry yeast for bread. There are ways to make natural yeast from things such as sultanas, which is what we do. It takes a few days, but it is all-natural and works very well.

## HEALTH CONCERNS

Some important items to have in your home.

These are a few of the vitamins and health products that we personally use and always keep stock of. It includes large quantities of Vitamin B, C, D and E, Selenium, Fish Oil, Calcium, Magnesium, Ascorbic Acid Powder (Vitamin C Concentrate), Acia Berry Powder (Antioxidant), Beta Carotene, Mineral Supplements and Colloidal Silver. We also have our own Colloidal Silver generator as well.

Silver rods for making your own silver well can be purchased online.

I would recommend the use of the Salt Pipe Inhaler, having used one now for several months, and found it very good during times of chest infection with the children. Several people I know have also bought one on my recommendation and found it to be useful. Their website is [www.saltpipeinhaler.com](http://www.saltpipeinhaler.com)

We also use a variety of pharmaceutical products, such as Listerine for germs, Irish Moss for sore throats or coughs, Zyrtec and Prospan for kids, which breaks down mucus, and a great product called First Defence by Vicks, which kills germs in the nasal passage/throat before they take hold.

A good first aid kit will incorporate everything you might need from minor cuts and insect bites, to more serious injuries. We have three extensive medical supply boxes stored in a cabinet away from the children, and smaller ones like these for everyday things such as pain relief, itchy skin, sore throats, cuts and abrasions and other non life threatening conditions.

Items such as Calamine Lotion, witch hazel, burn creams, Vaseline, band-aids, Panadol, Betadene, elastic bandages, heat packs, cold packs, rubber gloves, needles for splinters and cotton buds are all essential items. We found it better and cheaper to buy containers such as these and fill them with individual items from your chemist and health shop than to buy ready made first aid kits. That way you always know exactly what you've got will fit your family's requirements and special needs.

Here you can see a variety of miscellaneous items that we keep on hand for emergencies and for long-term stock.

We have a large number of church candles, as they do not require any stand or base, and can be placed on a shelf or table easily. They also last much longer than common household candles that you buy which require a candleholder.

A Dolphin Torch (not shown here) is an essential item as they are strong, waterproof and give off a lot of light at night, especially if you are on a large property. I have three of them and they are invaluable. You can see a number of spare 12V batteries in the middle, which range for \$3.00 to \$12 depending on the brand.

The item in the middle bottom is a solar/windup torch, which requires no batteries. Next to it is a small high brightness LED torch. The silver packet is a Hot 2 Go pouch for instantly heating up food. On the right is what every home should have, a fire extinguisher. You should have one for electrical fires and one for paper fires.

When the announcement was made that they were stopping the supply of regular light globes and replacing them with the energy efficient fluoro globes, we bought nearly 100 spare bulbs for our stock, which should last us about 8-10 years. I don't like fluoro light as it is cold and flickers which is like a very fast strobe effect and it bothers my eyes.

The large containers at the back are sorbolene moisturiser and de-mineralised water. In the front you can see two types of multi-tools, one is a high quality Leatherman. Matches, lighters, herbal and non-fluoride toothpaste (while you can still get them).

I cannot express enough the benefits and uses of Bi-Carb soda, and we have boxes of it here. It can be used for everything from cleaning the oil off your driveway, to getting rid of mould and mildew on your vegetables leaves, to fixing your Candida problem.

# Taking leave for illness is not to be sneezed at

**E**MLOYERS are being urged to take a tough stance against sniffing and sneezing staff during winter by sending them home.

Health experts warn workers who place themselves above the health of their co-workers and company should be counselled and may be in breach of occupational health and safety laws.

Quality Health Screenings corporate health spokeswoman Claire Hendy says some workers think they have to soldier on at work, regardless of how sick they are, to be seen as a good employee. "But it's up to employers to emphasise to them that they aren't doing anybody any favours," she says.

"Not only do they make other people sick, they also make themselves sicker for longer and they end up with secondary infections such as bronchitis.

"Many people think that they or their work is so important that they can't afford to be sick, but if it's that important it needs their full attention and no one is able to provide that when they're sick."

The SA Health Department advises people to stay away from work until a fever is gone and they feel well.

It says the flu virus is easily transmittable because it is airborne.

When a worker who is affected by the flu virus coughs or sneezes into the air, infected droplets are spread and are breathed in by other staff.

The fine aerosols people emit when they talk also can spread the virus. Buildings with air-

Workers who place themselves above the health of their co-workers and company may be in breach of occupational health and safety legislation.

## FLU TIPS

- Organise flu vaccinations for staff.
- Provide hand sanitiser near doorways around the office.
- Offer fruit and vegetables to keep immune systems boosted.
- Change company attitude from soldiering on through sickness to thinking of the health of the whole team.

conditioners that do not have ultra-fine filters will disperse these aerosols through the climate-control system and throughout the office. The virus

also can spread when workers touch their mouth, nose or eyes with fingers that have picked up the virus from the air or from an object previously touched by someone with the flu.

A Safework SA spokeswoman says employers have a duty of care to protect the health, safety and welfare of their employees in the workplace, under the Occupational Health, Safety and Welfare Act 1986.

She says it includes influenza because it is highly contagious and debilitating. "Employees also have a duty of care to protect their own health and safety and to avoid adversely affecting the

health and safety of other people in the workplace," she says.

As well as making staff ill, the flu makes workers less effective in completing their role in the workplace.

The flu attacks cells in the body, including the brain and muscles, which impairs the concentration, memory and stamina of workers.

Staff perform poorly because they cannot concentrate but they recover significantly faster if they receive adequate rest and fluids.

The Health Department says it is important to treat flu as soon as possible by staying at home, resting, preferably in bed, and drinking lots of fluids.

Over the past 12 months, we have noticed a considerable increase in the number of people who appear sick, or have a very nasty rattling wet or hacking cough. What concerns me however is not the fact that they are sick, or where they might have gotten it from, but the fact that Aussies in general seem to be oblivious to hygiene, and don't seem to mind spreading around whatever they have to everyone else.

It has become so bad that we no longer take our children to the shopping centres and supermarkets. We take masks with us for emergency situations, such as being stuck in a checkout line with a family of sick children, possibly whooping cough, and their parents allowing them to cough freely over every one and every thing.

I had to rush our five year old son to the hospital last year, as he had developed bronchial pneumonia, which triggered an asthma-style attack. He almost died in my arms because he just couldn't breathe.

I have never been so frightened in my life to see him almost passing out in the back seat as we raced to the hospital in a friend's car (getting a ticket on the way).

Fortunately he recovered, but the point of it is that we should take advice from the Japanese, and always wear a mask if we have a cough, or don't want to catch one.

One of the worst places that you can go of course is the hospital or your local GP. You can pretty much guarantee that a dozen or more people before you probably had some kind of flu related symptom and have filled up the waiting room with clouds of airborne germs and viruses.

We always wear masks to the GP, but the strangest thing is people's reaction. People stare and whisper, thinking you must have some sort of terrible disease, while they sit there coughing their lungs up.

Do us all a favour people...

## WEAR A MASK IF YOU ARE SICK AND NEED TO GO OUT.

We use special virus masks that are imported from Japan, that have gel inserts to absorb germs and we always keep them in our bag whenever we go out, just in case.

## SEED STORAGE

This is a small portion of our seed collection that we have been slowly gathering over the past 18 months or so. It includes Heirloom seeds and non-GM seeds from suppliers such as Eden Seeds as well as other makers such as DT Brown, Mrs Fothergill's, Growers Pride etc.

All of these packets have an expiry date of 2012 or 2013, but we have separate containers with seeds we are currently using with expiry dates of 2010 and 2011.

The two packages at the top left have been vacuum-sealed using a Sunbeam VAC440 Food Saver, which was a gift from a friend who understands the importance of preparation in these times that we live in. If you have a chest freezer, I would suggest keeping them in there, as the colder temperature will keep them much longer.

## THE DOOMSDAY VAULT

By now, most of you have heard about the Svalbard Global Seed Vault Doomsday Vault or the Doomsday Vault as the media have nicknamed it, which has been built to store the worlds seeds in the event of a catastrophic event. It was officially opened on February 26, 2008, to serve as the ultimate safety net for one of the world's most important natural resources.

The vault houses samples of 526,000 unique crop varieties and while seeds could remain safe and undamaged for decades at much higher temperatures, the vault room temperature in Svalbard is kept between -16 to -17C. The Norwegian government funded the construction of the Vault in its entirety at a cost of \$9 million, and will continue to fund the maintenance of the facility, for an annual cost of \$150,000.

The Vault is dug into a mountainside near the village of Longyearbyen. Svalbard is a group of islands nearly a thousand kilometres north of Norway. For nearly four months a year the islands are enveloped in total darkness. Permafrost and thick rock ensure that, even without electricity, the seed samples remain frozen.

## DRYING AND SEALING

The food dryer that we purchased works well, but we found we had to put it in a spare room whenever we were using it because of the noise of the fan, and also the smell of whatever you are drying filling the air. A tip that we discovered is not to mix up what you are drying. For example if you are drying capsicum, everything else you are drying will smell and taste like capsicum if you try doing different layers of fruit or vegetables.

All of these products of course use power, so it might be best to explore other methods of drying fruit, meat or vegetables using the sun and wind. I have seen several designs and plans on the Internet for air/sun food dryers and as with all these things, a good knowledge of handyman skills will be of great benefit.

This is the Vacuum Packaging FoodSaver that we use, and we also purchased a Sunbeam food de-hydrator so that we could dry and store food and keep seeds longer.

The food de-hydrator works well, but consumes a lot of power and needs a separate room to use it in.

## GROWING YOUR OWN FOOD

This is the lettuce “tree” that I spoke about in my interview with Adam Davis from Truth Movement Australia last year. I had been getting beautiful lettuces in these containers, then one day this one decided to go to seed, and kept growing like Jack and the Beanstalk. I’ve learned a lot about growing vegetables over the past two years, and made a lot of mistakes, especially with Pumpkins and Corn. You soon develop a great respect for farmers, and an appreciation of the time and effort involved just to grow one single vegetable (around 3 months).

It takes time to learn about how to properly prepare soil, as well as the correct watering methods, what to do when you get insects or mildew, what times to plant etc.

A couple of things I found useful is to grow garlic around your vegetables to help keep insects away, and to water the ground, not the plants, as this can lead to mildew. Bi-Carb soda or milk in water, sprayed on the leaves is a good fix.

If you have limited space around your house, you can use planter boxes, or even recycle Styrofoam boxes as we've done in the past. We had a great backyard crop using these when we were living in the suburbs.

Of course, if you have the space I highly recommend building a permanent greenhouse, as you'll need it for the winter months to keep the vegetables and roots warmer.

You can buy second-hand timber quite cheaply and then get a roll of builder's vinyl for the walls and roof. The other way is to use long lengths of PVC tubing, about 20mm in diameter and create a curved roof like this one.

Now a lot of you might not have the advantage of having a lot of space, both in your garden and in the house. This I feel has been a slow push by governments to force us off of farms and into the cities and suburbs.

These days I see new houses being built on as little as 330sqm, with no back garden, and not even room to build a garage. Essentially what this does is force you to be dependent on what is provided to you, in terms of food, energy and resources. That was our primary concern in our previous home, which is why we made the decision to move to a rural property with acreage.

Since coming here, we have all experienced profound changes to our lifestyle, consciousness and perception of reality. One of the first things I noticed was how long a day really is.

Once you remove useless items such as clocks and start to follow the movement and timing of the sun and moon, things slow down and you start to enjoy life the way it was meant to be. Weekends have become a thing of the past, as they no longer exist. We don't necessarily know what day of the week it is, unless we have to interface with the world of commerce or have an appointment with a hairdresser, dentist or other business operating on the 9-5 working week (slave system).

Now, we awake with the sun, we go about our day and farm chores each day with honest loving care, and educate our children in every aspect of life. Compared with other children of the same age, ours are easily one or two years ahead in their vocabulary, math, knowledge, experience and abilities. Their creativity is encouraged and not judged or compared. We have been horrified at the changes in the school system recently with the introduction of the MYSCHOOL website and baby tracking.

## Children's life records to be tracked from birth

# BARCODE BABIES

**LUCY HOOD**  
EDUCATIONNOW EDITOR

EVERY South Australian child will be tracked by the Education Department from birth until the age of eight using a data-sharing system to identify children in need and improve their development.

Children will be tracked

by collating information from peri-natal statistics, emergency department records, school census data and dental and child health records.

The data will be used to compare how certain characteristics affect a child's education and development.

**Continued Page 6**

Our 18 month old girl loves nature, and spends most of her time outside with me, feeding chickens, riding with me on our quad bike around the property, playing in the all-wooden playground that I've built for them and I often find her hugging the trees, talking with birds or hand feeding and hugging the chickens.

You see the thing that keeps all of us under control is stress. It's the underlying fear of being late, not having enough money to pay for the rent or mortgage, fear of what other people think of us, fear of breaking the policy that governments and police impose, fear of getting a parking ticket or speeding fine, fear of just about everything that keeps you running, and keeps you on edge so that it becomes your entire focus.

When you're in that state of being, you cannot make rational decisions, nor can you access higher functions of your brain, or connect with the infinite universal energies and frequencies. In that state you are switched off, not able to receive inspiration or new energy, and that is where they want you to be. Your mind is like a modem, a transmitter and receiver.

A free mind is a dangerous thing to those who are trying to enslave it. Distraction and addiction are the basis of all consumerism today.

A scene from John Carpenter's classic film "They Live". He admits in an interview that he hates authority.

## THE TROUBLE WITH THE SECRET

Most of you have seen the DVD The Secret by now, and probably a great many of you, like myself have explored it's meaning by researching further, and absorbing as much as possible from a great many sources.

In 2006 I set out on a three year journey to explore the Secret, and absorbed hundreds of hours of tapes, books, mp3's and video from every one of the teachers of the subject including T Harv Eker, Bill Harris, Wayne Dyer, Abraham Hicks, Jack Canfield, Tony Robbins, Lisa Nichols, Joe Vitale, Stuart Lichtman, Napoleon Hill and Charles F. Haanel.

An interesting phenomena took place over this period, and I believe this is the problem with The Secret. Fortunately you won't have to go through all of that, as I did.

You see, The Secret and all these other teachers train you to focus upon what it is that you want, whatever that might be, with the exclusion of all other things. Some tell you to create elaborate drawings, collages, journals or post-it notes as a constant reminder to yourself of what it is you want, or where you want to be.

What I could not comprehend is that when I was a child and even a teenager, I could do this power of attraction process without any problem at all, and whatever it was I was focusing on, usually showed up within a week or two.

You would expect that with 3 years of training, that I would be better at it. Wrong. It had the opposite effect, and we ended up with nothing, sleeping on the floors and in the spare rooms of friends and family for about 9 months.

One day, I was sitting outside under a tree, a beautiful pepper tree, which looks like a willow. As I laid there in the warmth of the sun, all I could hear was the wind in the tree and the sound of birds, no other man made noise or distraction, and I drifted into a heightened sense of perception.

Instead of thinking about what I wanted, I let myself experience a complete sense of gratitude and thanks for everything I had. It was a wonderful feeling. In that moment, there was a “knowing” that I already had everything I wanted or needed, and that in order to attract it, I had to first stop focusing on the wanting or needing.

If you are in a state of wanting or needing, then obviously you do not have what it is that you desire, and are not happy. As soon as that happened, everything that I had thought about, started to appear, without effort.

To test this out, I decided to try and attract something not generally available, so I chose my first bicycle. Now it’s not the sort of thing you could go out and buy, because I had built this bike from scratch, from bits and pieces my father helped me to collect back in 1978.

All I did was to focus upon the love I had for that bike, and the feeling of assembling it, riding it and experiencing it. There was no wanting or needing, or any contemplation of how to get it, as that job of manifestation is the realm of the universal mind, the “all there is” or whatever label or personification you prefer for the source of everything, which includes the term god.

I went inside, and had a sudden urge to look on Ebay. I found that bike, had it sent from Melbourne and was riding it within 10 days of my thought of it. Now I should mention that I only replaced one or two items, which were the handgrips and pedals, and changed the colour to the exact same one I had painted it in 1978, but here was a perfect replica.

I’ve done this now with everything we have, and threw away all my research on the subject.

The reason that it used to be so easy, when I was young, was because I had the ability to visualise what I wanted in my mind in great detail, in three dimensions, turn it around in my mind, take it apart, re-assemble it, and completely experience it.

That powerful mental image was then able to manifest itself into reality, to become physical. Everything starts out as a thought, before it becomes manifest. What I had been doing was clouding that simple process of thought creation by trying to force the universe into what, where and when. I had let go of just allowing it to be.

I see so many of my family and friends operating in the negative aspects of creation, where they constantly verbalise and focus on the things that they say that they don’t want in their lives.

It seems to surprise and frustrate them when those things keep showing up, which seems obvious to me, but there is also a kind of satisfaction for them knowing that they are right, and that they have escaped the possibility of trying and failing. They seem to be happy to accept that as their reality, perhaps because we’re not taught any better.

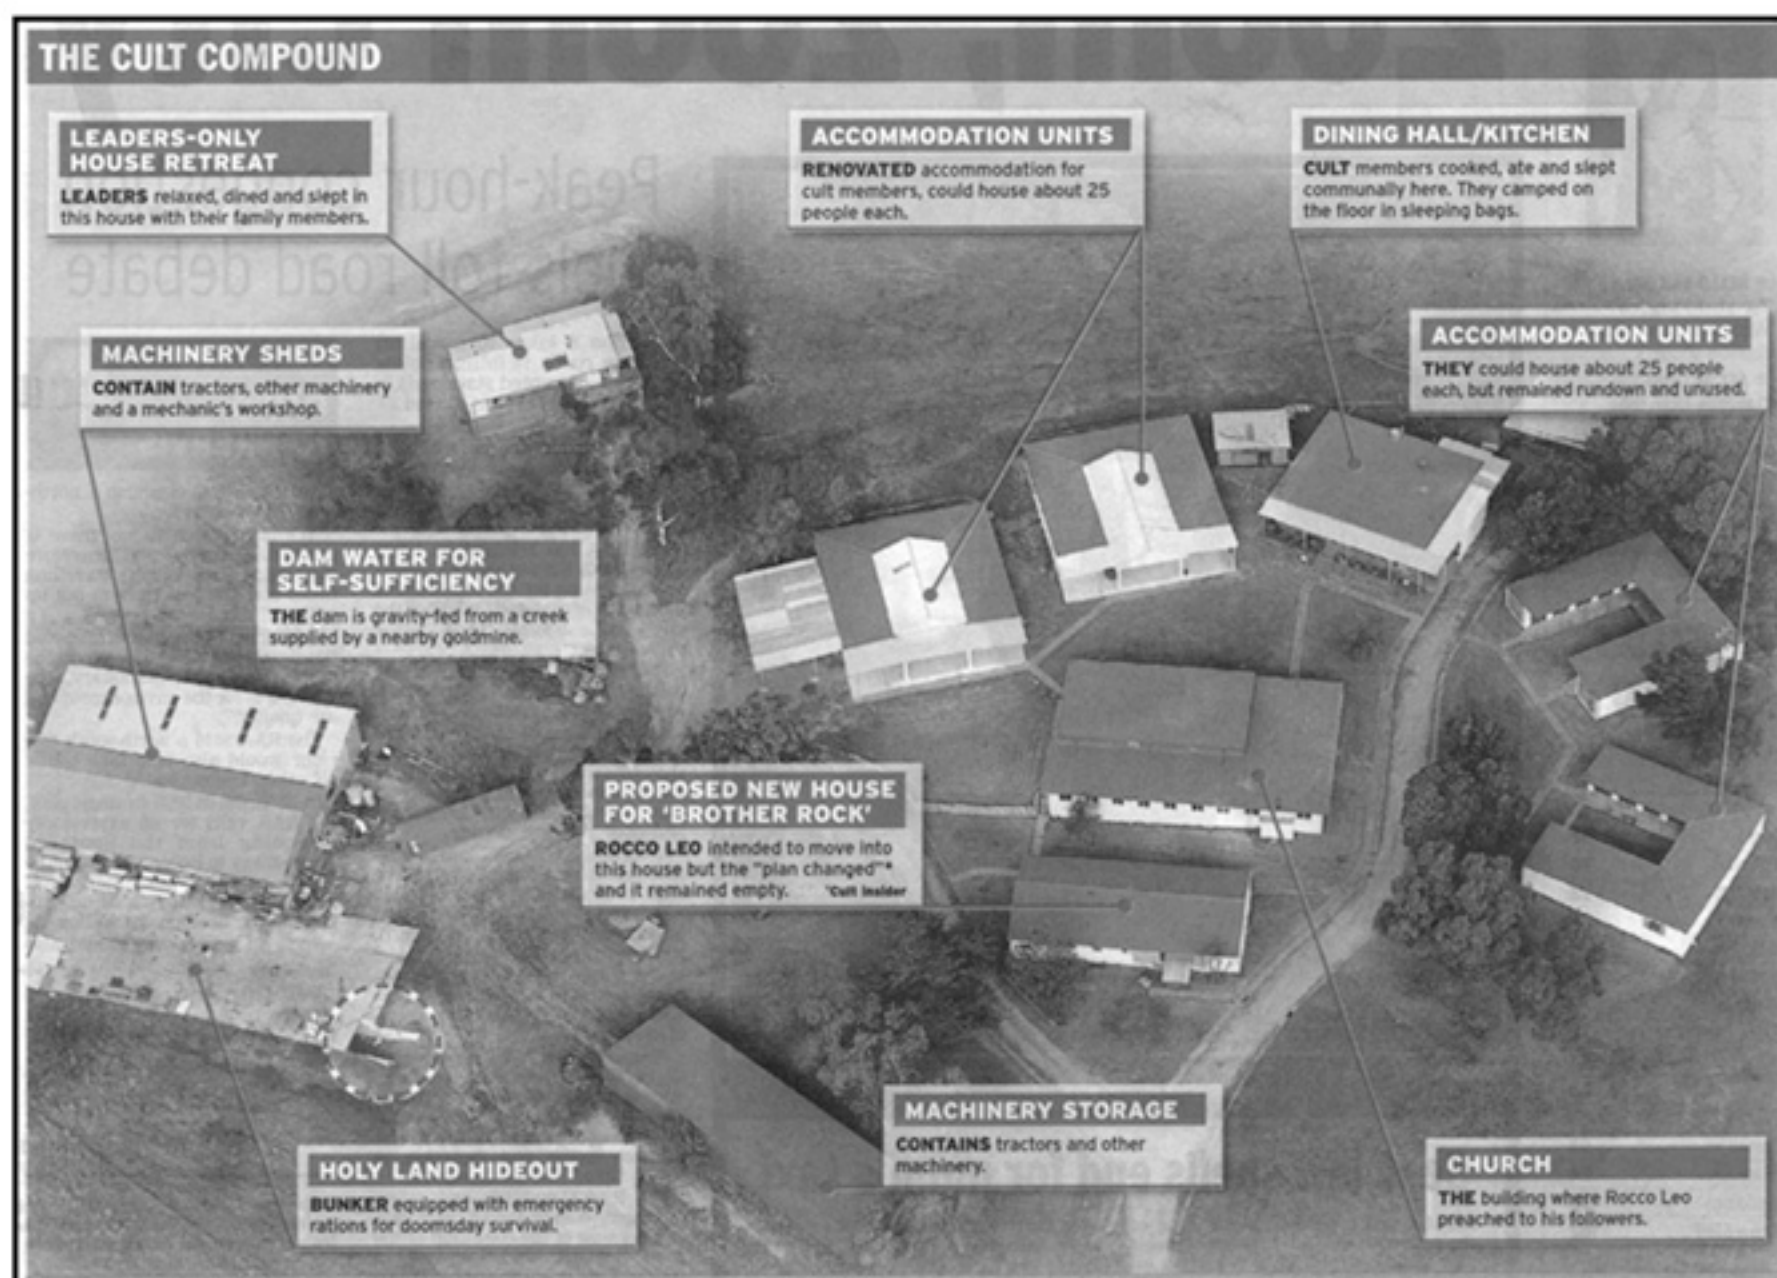

## MEDIA SPIN AND PROPAGANDA

Many of you will recall the terrible events that took place at WACO Texas involving the ATF and the Branch Davidians. The media spin that was created at the time to persuade us that these people were dangerous involved the suggestion that they were stockpiling weapons, brainwashing people and also showing clips of David Koresh claiming "you better watch out because I'm God".

Of course, this was a clever re-arrangement of an interview with 60 Minutes, where David Koresh is laughing at the suggestion that he got an 80 year old woman pregnant. He jokingly says "well if that's true, then you better watch out...because I'm God."

In a revealing documentary called WACO: The Big Lie, Linda Thompson revealed how the ATF agents stormed the house, shot themselves, shot their own men, used tanks and flamethrowers to destroy the house, and collapsed the underground tunnels killing the innocent women and children that were sheltering from the attack. It was an attack on freedom, and against the stand that these people were making against the tyranny of the government. They were claiming their god-given rights and sovereignty.

Here in South Australia recently, the media jumped on a frighteningly similar scenario.

## In Mt Magnificent's hills, secrets of The Promised Land

**A**N Agape cult insider has revealed its Mt Magnificent property included a secret underground bunker to shelter members from the end of the world.

The bunker, which cult leader Rocco Leo named "The Holy Land Hideout", is said to be more than 50m long, 30m wide and contains food supplies.

Nestled in sprawling hills about 20km west of Willunga, the compound is set back from main roads and surrounded by hobby farmers, making it the perfect hiding place for the doomsday cult.

The property - which they called The Promised Land - is between an

**SARAH MENNIE**

abandoned home and a slaughterhouse that employs just two men. Cult members were able to go about their business virtually unnoticed for at least the past five years.

Hobby farmers driving past the innocuous-looking gates on Blackfellows Creek Rd would not have noticed a thing: a regular farm fence

keeps cows from straying on to the road, goats graze quietly in the paddocks, and a shimmering dam completes the picturesque setting. It is the sort of place you would dream of retiring to. But an aerial view tells a very different story.

It is a scene eerily reminiscent of a compound in Waco, Texas, where Branch Davidian cult leader David Koresh and 75 of his followers, including 30 children, died in 1993 on a property they named Mt Carmel.

The insider said the property had no security, with members simply opening two farm gates to gain entry.

He said members would gather at

the property - sometimes 20 or 30 at a time - and work on maintaining the land. "There were children there, it was no problem," he said. The man said members were "different nationalities - Australians, Italians, Greeks". Members fed the 50 goats and six or seven cows with feed kept in two sheds either side of the kitchen.

In the evenings, members were made to sleep on the floor of the dining room, inside the kitchen building, in sleeping bags and on bean bags, while the leaders and their families relaxed, "watched television and got warm" in the leaders-only house. The man said the site was powered by mains elec-

tricity. A dam at the front of the property is maintained by a gravity-fed water supply from a nearby gold mine. Prior to Leo buying the property more than five years ago, the dam water was shared between local land owners, but neighbours say the cult quickly cut off their supply.

The complex was once run as a drug and alcohol rehabilitation centre by the Adelaide Central Mission. One neighbour, who did not want to be named, said gunshots on the property had become more frequent in the last five to six weeks. "I know what a .22 for general farm use sounds like," the woman said. "But these were different guns."

**HIDING:** Rocco Leo and girlfriend Mari Antoinette Veneziano

## Members brainwashed on world conspiracy

CULT members – including children as young as five – were ordered to watch chilling right-wing conspiracy theory videos urging opposition to a supposed secret plan by shadowy elites to impose a single world government, a former cult member claims.

The videos point to a host of so-called conspiracies, including the September 11, 2001, attacks on the World Trade Centre, the torpedoing of the *Lusitania* in World War I and the bombing of Pearl Harbour as being orchestrated by sinister wealthy powerbrokers intent on taking control of the world.

The American-made videos – including *Endgame* and *Wake Up Call* – were also shown to the congregation with the warning from church leaders that “this is what will happen when the government imposes martial law”.

The videos – with graphic images including enslavement, war dead, starvation and bombings – each run for 2½ hours, urging viewers not to trust

authority figures, including politicians, and constantly refer to secret plans by a network of the rich and powerful to create a New World Order.

This would see the end of individual freedom, a single world government and constant Big Brother-style surveillance to quell any protests.

Topics covered include the secretive Bilderberg Group, Trilateral Commission, Council on Foreign Relations, North American Union, the Rockefeller/Rothschild families, Freemasonry, September 11, war profiteering, the “phony War on Terrorism”, the impending Big Brother Surveillance Society, civil liberties, microchipping and media control.

*Wake Up Call* tells viewers to “put everything you think you know temporarily on hold and open up to the possibility you may have been systematically deceived and lied to your entire life”.

**BRAD CROUCH**

Please read this article carefully, as it is suggesting that if we question events such as 9/11, or watch documentaries by people such as Alex Jones, or believe in conspiracies such as the New World Order then we must be brainwashed. I have no idea how much of the allegations are true or not, but what I can see is the familiar combination of suggestive words such as “guns, children, brainwashing, cult and doomsday”.

To be honest, from the photo and description of the property, this would be an ideal location for anyone to create a self-sufficient lifestyle and be prepared for any event, including a stock market collapse, war, police state or natural disaster. Obviously this article was written by someone who has no idea what goes on behind the scenes.

## WHAT EXACTLY IS THE CROWN?

I have explored this topic before in Book One, however I'd like to add a few updates to that information that you might find of interest.

Wikipedia describes The Crown as follows:

*"The Crown is a corporation sole that in the Commonwealth realms, as well as in any provincial or state sub-divisions thereof, represents the legal embodiment of governance, whether executive, legislative, or judicial. It evolved naturally first in the United Kingdom as a separation of the literal crown and property of the nation state from the person and personal property of the monarch; a concept which then spread via British colonization and is now rooted in the legal lexicon of the other 15 independent realms. It is thus not to be confused with any physical crown, such as those in the Crown Jewels, which are the property of the Crown and not the reigning monarch."*

*The Monarch of the Commonwealth realms is a corporation sole – she or he may possess property as monarch, which is distinct from the property he or she possesses personally, and may do acts as monarch distinguished from their personal acts. In fact, Elizabeth II has several corporations sole – Her Majesty the Queen in Right of the United Kingdom, Her Majesty the Queen in Right of Canada, Her Majesty the Queen in Right of Australia are all distinct corporations sole. "*

Because Australia and Canada have federal systems of government, Elizabeth also has a distinct corporation sole for each of the Australian states and Canadian provinces, for example, Her Majesty the Queen in Right of Queensland and Her Majesty the Queen in Right of Ontario.

In Australia we have a Governor-General who acts as the representative of The Crown and I always relate the term to a governor on a vehicle, which controls its speed, and ultimately its ability to reach it's full potential by restricting its freedom.

Here you see two examples of extracts from documents I found on the US SEC. The thing that interested me was the underwriting agreement I found between JP Morgan (see book three) and the New South Wales Treasury Corporation.

J.P. Morgan Securities Inc.  
270 Park Avenue  
New York, New York 10017

Dear Sirs:

New South Wales Treasury Corporation (the "Corporation"), a statutory corporation constituted under the laws of the State of New South Wales, Commonwealth of Australia, and The Crown in Right of New South Wales (the "Guarantor") propose to issue and sell US\$[•] aggregate principal amount of the Corporation's [•]% Notes due 20[•], registered pursuant to the registration statement (the "Registration Statement") referred to in Section 1.A(a) of this Agreement (the "Notes"), guaranteed pursuant to Section 22A(1) of the Public Authorities (Financial Arrangements) Act 1987 of New South Wales (the "PAFA Act") by the Guarantor (the "Guarantee"). The Notes are to be issued under a fiscal agency agreement, dated [as of the date hereof] (the "Fiscal Agency Agreement"), among the Corporation, Citibank N.A., London Branch, as Paying Agent, Transfer Agent and Registrar, and Citicorp International Limited, as Fiscal Agent. Subject to the terms and conditions set forth herein, the Corporation hereby appoints you as lead manager (the "Manager") to act on behalf of the underwriter(s) named in Schedule I hereto (the "Underwriters"), and agrees to sell to the Underwriters, and the Underwriters agree to purchase, severally and not jointly, the principal amounts of the Notes set forth opposite their names in Schedule I hereto at a purchase price equal to [•]% of the principal amount of the Notes (less the underwriting discount or commission of [•]%), plus accrued interest, if any, on the Notes from [•], 2009 to the date of payment and delivery of the principal amount of the Notes.

**SECTION 1. Representations and Warranties of the Corporation and the Guarantor**

A. The Corporation represents and warrants to, and acknowledges and agrees with, each Underwriter as follows:

(a) A registration statement on Schedule B (File No. 333-[•]) (the "Initial Registration Statement") in respect of the Notes and the Guarantee has been filed with the Securities and Exchange Commission (the "Commission"); the Initial Registration Statement and any post-effective amendment thereto, each in the form heretofore delivered to the Manager, and, excluding exhibits thereto, delivered to the Manager for each of the other Underwriters, have been declared effective by the Commission in such form; other than a registration statement, if any, increasing the size of the offering (a "Rule 462(b) Registration Statement"), filed pursuant to Rule

CONFIRMED AND ACCEPTED, as of  
the date first above written:

J.P. MORGAN SECURITIES INC.

By: \_\_\_\_\_  
Name:  
Date:

So in essence, JP Morgan is providing funds to the Crown and it's Corporations, and we the people of Australia and it's resources are the physical assets that are being offered and traded as collateral.

**Prospectus summary**

*The following summary should only be read in connection with, and is qualified by, the more detailed information and financial data presented elsewhere in this Prospectus.*

**New South Wales Treasury Corporation**

New South Wales Treasury Corporation (the "Issuer") was established in June 1983 under the provisions of the Treasury Corporation Act 1983 of New South Wales (the "TCA"). The TCA states the objects and purposes of the Issuer. The Issuer is the central financing agency for the State of New South Wales in the Commonwealth of Australia, and for all public authorities within the provisions of the Public Authorities (Financial Arrangements) Act 1987 of New South Wales (the "PAFA Act"). These are predominantly semi-governmental authorities involved in productive activities, including electricity generation, water supply, rail and road transport and highway construction. Local government authorities may borrow through the Issuer if they so desire.

The Issuer is empowered to enter into all forms of financial accommodation, and funds borrowed by the Issuer are lent to the relevant public authorities of the State of New South Wales. Funds raised by the Issuer are invested by it pending advances to such borrowers. The Issuer also provides liability and asset management services for authorities and the Guarantor (as defined below).

The principal office of the Issuer is at Level 22, Governor Philip Tower, 1 Finner Place, Sydney, New South Wales 2000, Australia and its telephone number is (612) 9325-9325.

For further details regarding the Issuer, see "New South Wales Treasury Corporation" below.

**Guarantor**

The Guarantor is The Crown in Right of New South Wales (the "Guarantor"). The State of New South Wales (the "State", "New South Wales" or "NSW") is Australia's largest state by population, with approximately 7.0 million people, or 33%, of Australia's total population as at December 31, 2008. New South Wales and five other British colonies became federated states under the name of the Commonwealth of Australia on January 1, 1901. The Commonwealth of Australia was formed under the Commonwealth of Australia Constitution Act (an Act of the British Parliament).

For further details regarding the Guarantor, see "The State of New South Wales" below.

This prospectus summary that I also found on the US SEC describes the Corporation as the Guarantor with its assets as the population.

The underwriting agreement between JP Morgan and the Crown is “unlimited” and you can see now that what these bankers have been saying all along is true...

*“I care not what puppet is placed on the throne of England to rule the Empire, the man that controls Britain's money supply controls the British Empire. And I control the money supply.”*

Baron Nathan Mayer Rothschild

United States of America.

Attention: Mr. Michael Coco,  
Office of International Corporate Finance

Re: New South Wales Treasury Corporation and the Crown in Right of  
New South Wales

Dear Mr. Coco:

We are writing on behalf of New South Wales Treasury Corporation ("NSW TCorp") and the Crown in Right of New South Wales ("New South Wales" and, together with NSW TCorp, the "Registrants") to request an interpretative letter that would facilitate the process by which NSW TCorp conducts public offerings of its debt securities guaranteed by New South Wales in the United States.

Release No. 33-6424 (dated September 2, 1982) (the "Release") defines "seasoned" issuers as those that have registered their securities under the Securities Act of 1933, as amended (the "Securities Act"), within five years and have not defaulted on any principal or interest. The Registrants are "seasoned" issuers, having offering and sold their securities within the last five years pursuant to a registration statement on Schedule B (No. 333-161649) (the "Initial Registration Statement").

MELBOURNE:63257.7

Sullivan & Cromwell practices only United States law in Australia.

Note that the company which represents the "Corporation" only practices United States Law (which includes the Uniform Commercial Code) in Australia, yet we are told that Australia only operates under the Consumer Credit Code when talking to Banks.

## COUNCIL RATES AND LAND OWNERSHIP

	<p><b>THE CORPORATION OF</b> <b>THE CITY OF NOARLUNGA</b></p> <p>MUNICIPAL OFFICES, NOARLUNGA REGIONAL CENTRE BEACH ROAD, CHRISTIE DOWNS, S.A. 5164</p>
<p>TOWN CLERK C. A. C. CATT, Dip.L.G., F.I.M.A., A.R.S.H., J.P.</p> <p>In reply quote: _____</p> <p>Refer enquiries to: _____</p>	<p>Postal Address: Box 8, P.O. Christies Beach S.A. 5165</p> <p>Telephone: 382 1022</p>
<p style="text-align: right;"><i>17th October, 1978</i></p>	

I found this letterhead from 1978, which clearly shows that the Crown Corporations that have been set up in the name of Suburbs and States should not be confused with the physical places themselves that have existed for all time, they merely govern those areas.

One is an artificial man-made entity; the other is a natural area of land without boundaries. There's a lot of confusion about land titles and ownership, so I'll outline the main terms and meanings and try to make sense of it for you. If you think that you own your property, think again.

**NATIVE TITLE** is the recognition by Australian law that some Indigenous people have rights and interests to their land that come from their traditional laws and customs. The majority judgement in the MABO case of Justices Brennan, Toohey and Gaudron found that native title rights, if they did exist, should really be treated as part of a broader human right to own and inherit property. The court held that Native Title existed without originating from the Crown.

**ALLODIAL TITLE** describes a situation where real property (land, buildings and fixtures) is owned free and clear of any superior landlord. In English common law the Crown has radical title or the allodium of all land in England and its Colonies, meaning that it is the ultimate owner of all land.

**FEE SIMPLE** (or fee simple absolute) is an estate in land, a form of freehold ownership. It is the usual way real estate is owned in common law countries, and is ordinarily the most complete ownership interest that can be had in real property short of Allodial title, which is often reserved for governments. The three components of the fee simple title is that it is alienable, devisable, and descendible.

**FREEHOLD** - For an estate to be a freehold it must possess two qualities: immobility (property must be land or some interest issuing out of or annexed to land); and ownership of it must be of an indeterminate duration. If the time of ownership can be fixed and determined, then it cannot be a freehold.

**TORRENS TITLE** is a system of land title where a register of land holdings maintained by the state guarantees an indefeasible title to those included in the register. The system was formulated to solve the problems of uncertainty, complexity and cost associated with the old system, which depended on proof of an unbroken title chain.

FEUDAL OWNERSHIP - Allodial title is used to distinguish absolute ownership of land by individuals from feudal ownership.

Property ownership is dependent on the relationship between a lord or sovereign and it's vassals. The feudal system is a political and military system which describes the situation we find ourselves in today.

Queen Elizabeth II is the largest landowner on Earth. She is the head of state of the United Kingdom and 31 other states and territories and is the legal owner of about 6,600 million acres of land, one sixth of the earth's non-ocean surface.

She is the only person on earth who owns whole countries, and who owns countries that are not her own domestic territory. This land ownership is separate from her role as head of state and is different from other monarchies where no such claim is made such as Norway, Belgium, and Denmark.

This makes her the richest individual on earth. However, there is no way easily to value her real estate.

There is no current market in the land of entire countries. At a rough estimate and based on the sale of Alaska to the USA by the Tsar, and of Louisiana to the USA by France, the Queen's land holding is worth a notional \$33,000,000,000,000 (Thirty three trillion dollars).

She is the world's largest landowner by a significant margin. The next largest landowner is the Russian state, with an overall ownership of 4,219 million acres, and a direct ownership comparable with the Queen's land holding of 2,447 million acres.

Her holding is based on the laws of the countries she owns and her land title is valid in all the countries she owns.

Her main holdings are Canada, the 2nd largest country on earth, with 2,467 million acres, Australia, the 7th largest country on earth with 1,900 million acres, Papua New Guinea with 114 million acres, New Zealand with 66 million acres and the UK with 60 million acres.

FREEBORN is a term associated with political agitator John Lilburne (1614–1657), a member of the Levellers, a 17th-century English political party. As a word, "freeborn" means to be born free, rather than to be born in slavery or bondage or vassalage. Lilburne argued for basic human rights that he termed "freeborn rights", which he defined as being rights that every human being is born with, as opposed to rights bestowed by government or by human law.

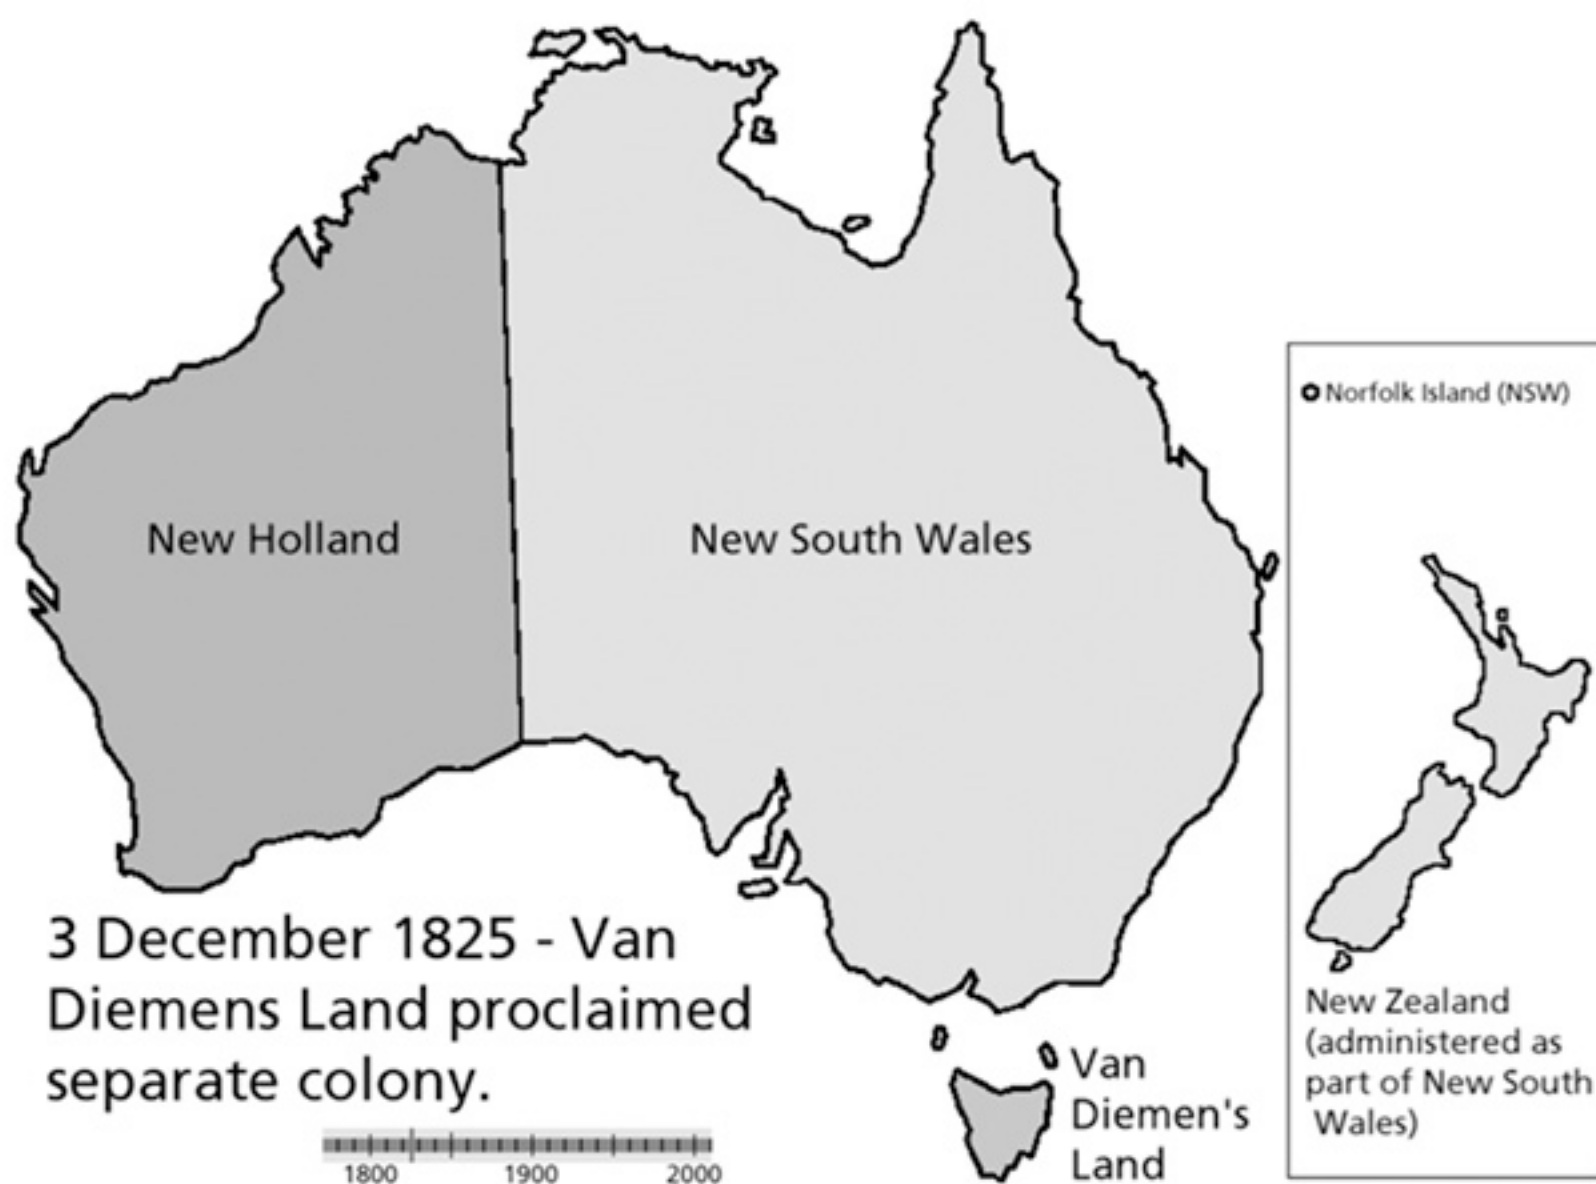

John Lilburne's concept of freeborn rights may have influenced the concept of inalienable rights mentioned in the United States Declaration of Independence.

A vassal, in the terminology that preceded and accompanied the feudalism of medieval Europe, is one who enters into mutual obligations with a monarch, usually of military support and mutual protection, in exchange for certain guarantees, which came to include the terrain held as a fief.

The fief (fee), under the system of medieval European feudalism, is often consisted of inheritable lands or revenue-producing property granted by a lord. This is generally provided to a vassal in return for a form of allegiance.

Only holders of an Allodial title on land truly own the land forever, which is not subject to property tax. I have asked the Land Titles office to show me the Bill of Sale from the original people of the land of Australia, evidencing the Crown's right to ownership.

This is what I have been telling people for some time now, that fee simple is a "title", a description of the land and not the land itself. You have the use of the land, but not absolute title to ownership of the land forever.

Western Australia has always been different to the other states as it was not one of the original colonies that agreed to the Federation of Australia.

A depiction of Vassals working the Lord's Land under the Fief system.

A Vassal had to promise loyalty to the king or to the lord who gave them the fief. They had to provide military service when needed. They had to act as a host when the king or lord came visiting and contribute funds for a ransom if the king or lord was captured in battle. They also had to provide gifts of cash to help offset the costs of any of the lord's special occasions, such as a wedding.

## THE DE-FACTO PM

With Kevin Rudd's recent swift removal from the office of Prime Minister without an election, we see the underlying powers at work and the desires of the International Banking Elite along with Corporate Heads flexing their political muscle.

I think that Julia Gillard was probably shoved into office temporarily to fulfil a few duties that Kevin was not tending to properly, including the mining super tax. Upon researching into the office of Prime Minister, we find an inconvenient truth. The title and office of Prime Minister is a "de-facto" one, not a "de-jure" (by law) one.

The position is not a legal one, rather is has been established by political convention, which means it has become an accepted (conventional) thing.

You will not find the position in the Constitution of Australia and you might be asking yourself a couple of questions at this point.

1. Why aren't we told about this?
2. Why do we have to vote for someone in a make-believe position?

Being a Corporation, you would expect it to have it's own policies. I covered this in book one, and gave reference to the Policy Enforcers (a term which has been widely adopted now by people such as John Harris who uses my artwork in his videos).

The Policy Enforcers are there just in case you don't like the Policy that this private Corporation makes. It employs Peace Officers in a different capacity to enforce (or more correctly to force upon you) their statutes, codes and regulations. As I've mentioned to you before, a Policeman or woman confronted by this revelation are often a bit shocked and I have experienced them hurrying away when I have asked to see a copy of the Public Policy that they en-force upon us.

## THE DEFENCE STATE

Since Halliburton, Raytheon and Northrop have moved their operations and businesses in to Adelaide, South Australia, it seems they have enough power to warrant a change to the State's slogans and license plates from the Festival State to The Defense State.

Of course, South Australia has long played host to the US secret bases, British nuclear tests and operates a number of strategic radar systems. Nuclear submarines are built here, and the US military monitors its global operations from bases such as Pine Gap.

This is a perfect example of what I am talking about, as it is really your choice as to how you perceive this image. You might perceive it as a harbinger of doom, a threat to the creativity and freedom of the state, or you might not even notice it.

Regardless of what anyone might think or say, I know that the landmass commonly referred to as South Australia is still The Festival State, and a place to celebrate the Arts and Music every year.

**Australia**

Attention: Steven Knight

Dear Mr. Knight,

I was reviewing the underwriting agreement between the CROWN IN RIGHT OF NEW SOUTH WALES, THE NEW SOUTH WALES TREASURY CORPORATION and JP MORGAN SECURITIES as seen on this page.

<http://www.sec.gov/Archives/edgar/data/71545/000095012309040043/z78728exv99wf.htm>

My question for you relates to the different artificial, man-made entities described here, and I was wondering where the actual living being known as Queen Elizabeth fits into all of this paperwork.

Is there a central CROWN CORPORATION made up of International Bankers, which work for the actual Queen of England, or is she merely a shareholder in that Corporation, which is controlled by them?

I believe transparency, full disclosure and honesty in relation to this matter is justified, as it affects everyone living on the landmass known as Australia.

Everyone who has taken an oath of allegiance to the Commonwealth of Australia, applied for citizenship or benefits, registered their private property, paid taxes or fines to, and who are essentially controlled by the policies of the corporation, have the basic right to contract, or not to contract with these entities. Full disclosure therefore is paramount, or any contract is rendered null and void by way of misrepresentation.

Therefore I would appreciate an explanation of exactly what and who is running the show.

Regards

Thomas Anderson

# IRON MOUNTAIN

The screenshot shows the Iron Mountain website's Corporate Overview page. At the top, there is a navigation bar with the Iron Mountain logo, a location dropdown set to 'Australia', and links for 'LOGIN', 'SUPPORT', and 'LOCATIONS'. Below this is a 'Company' header with a search bar and a main navigation menu including 'HOME', 'SERVICES', 'SOLUTIONS', 'RESOURCE CENTRE', 'PARTNERS', 'COMPANY', 'INVESTORS', and 'CONTACT US'. The breadcrumb trail reads 'Home > Company > Corporate Overview'. On the left sidebar, there are sections for 'Overview' (with links to History, At a Glance, Executive Leadership, Australian Leadership, and Corporate Overview Video), 'News', 'Events Calendar', and 'Careers'. A 'Our Mission' box states: 'To provide superior value to our customers by:'. The main content area features a large image of a vault door with the text 'PROTECTING THE WORLD'S INFORMATION Records Management' and a 'CORPORATE OVERVIEW' section. The overview text reads: 'Iron Mountain Incorporated (NYSE:IRM) helps organisations around the world reduce the costs and risks associated with information protection and storage. The Company offers comprehensive records management, data protection, and information destruction solutions along with the expertise and experience to address complex information challenges such as rising storage costs, litigation, regulatory compliance and disaster recovery. Founded in 1951, Iron Mountain is a trusted partner to more than 100,000 corporate clients throughout Australia, New Zealand South and South East Asia, North America, Europe, and Latin America'.

For those of you who have been wondering where all the data that the Government keeps on you is stored, I would suggest that this might be a good place to start.

Iron Mountain storage facility is located 200 feet underground in a former limestone mine and provides information protection and storage. It offers records management, data protection, recovery and secure shredding services to commercial, legal, banking, health care, accounting, insurance, entertainment, and government organizations worldwide. It has over 100,000 clients.

## GOVERNMENT SOLUTIONS

*“The information management and data protection needs of government departments and Government sector bodies are complex, time-sensitive, and ever increasing. With procedures and processes that generate vast quantities of information, governments are facing increasing pressure to implement cost-effective strategies that reduce the risks involved in protecting, managing, and providing timely access to that information.*”

*Ensuring your records are expertly managed and safely stored*

*Iron Mountain records management services enable you to reduce costs and eliminate risk by ensuring that your physical and digital records are expertly managed, safely stored, and immediately accessible. With multi-million dollar contracts across the Australia region, Iron Mountain has grown to become the trusted partner and reliable supplier of records and information management solutions to the Government Sector.”*

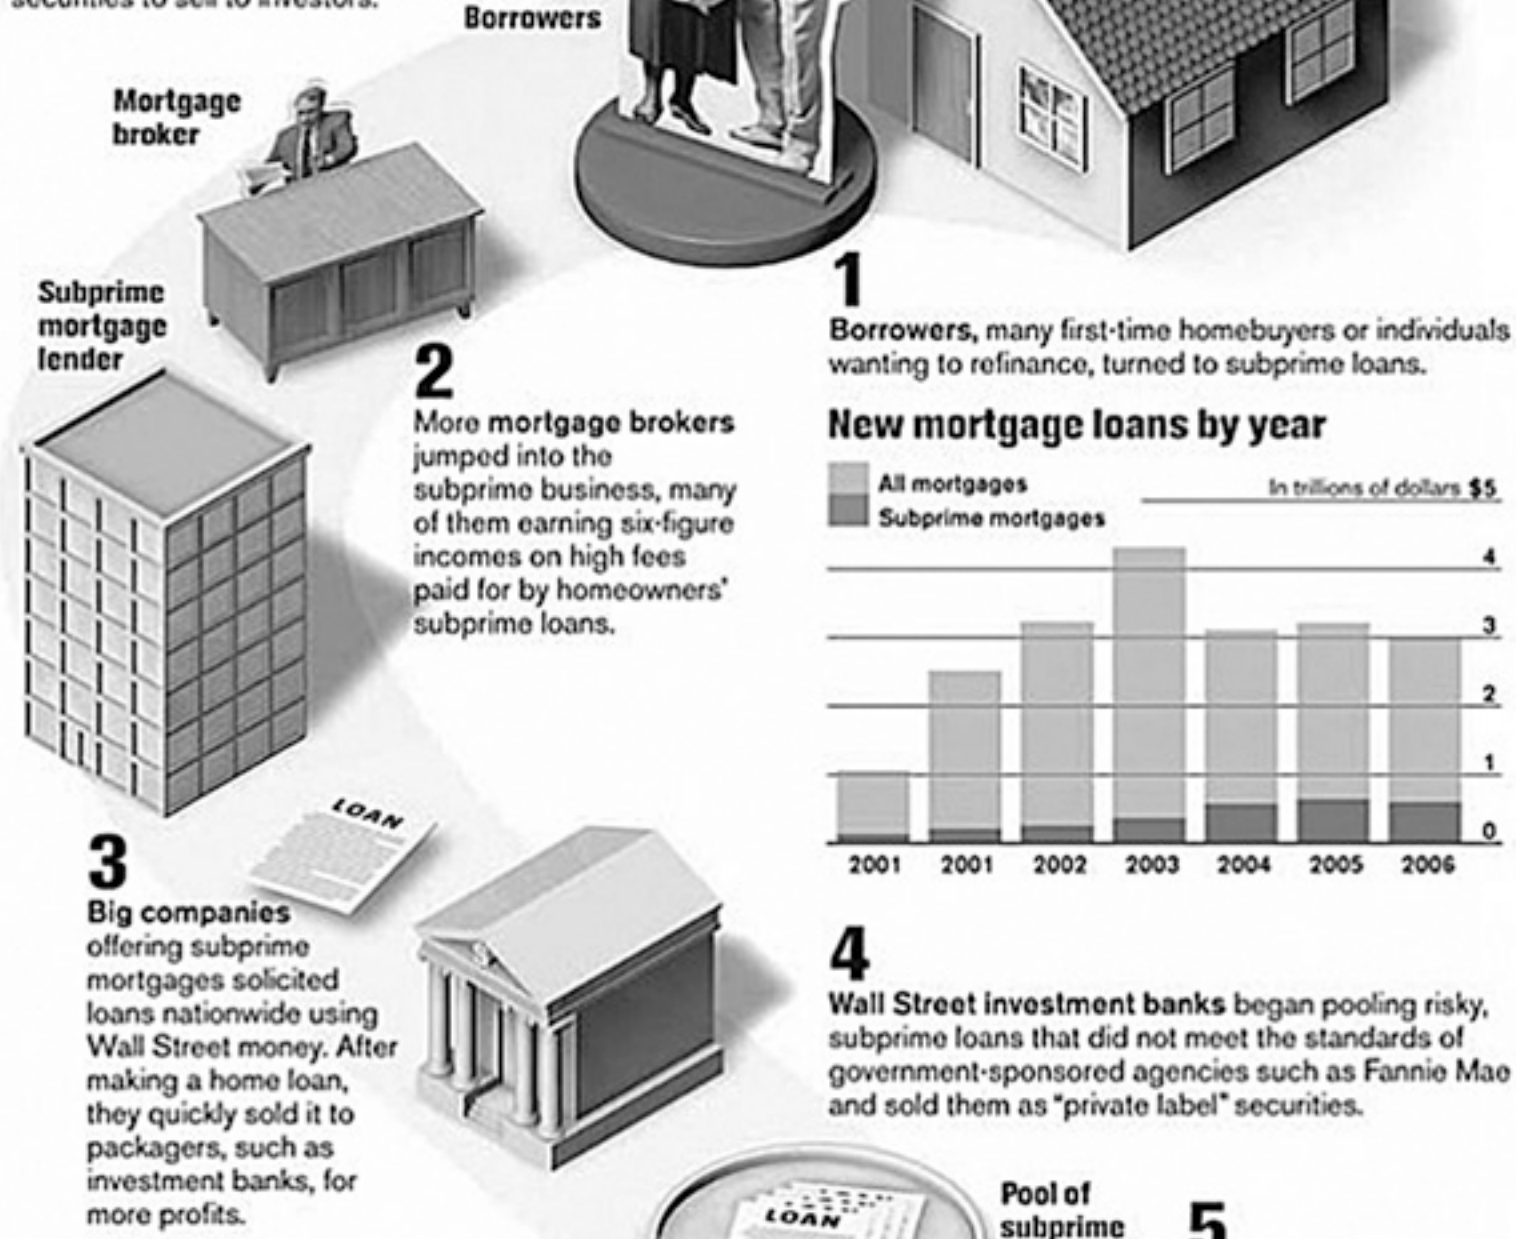

Interestingly, I came across this company by accident while researching the Iron Mountain report, a controversial military paper on the viability of long term Peace.

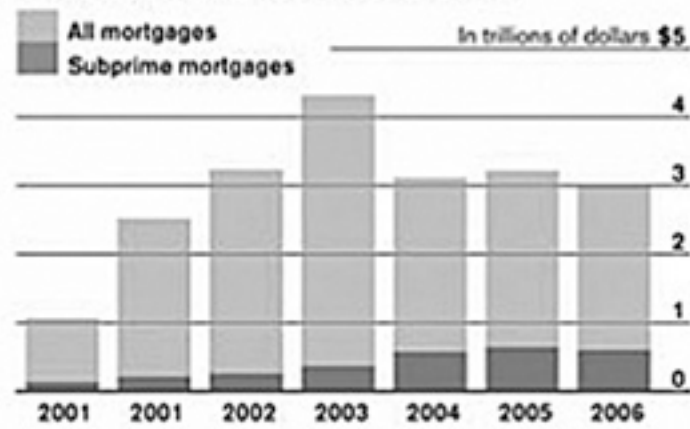

# SECURITISATION

## Securitization

At the heart of the cheap credit binge was a process known as securitization, where Wall Street began to buy up subprime mortgages and package them as mortgage-backed securities to sell to investors.

## New mortgage loans by year

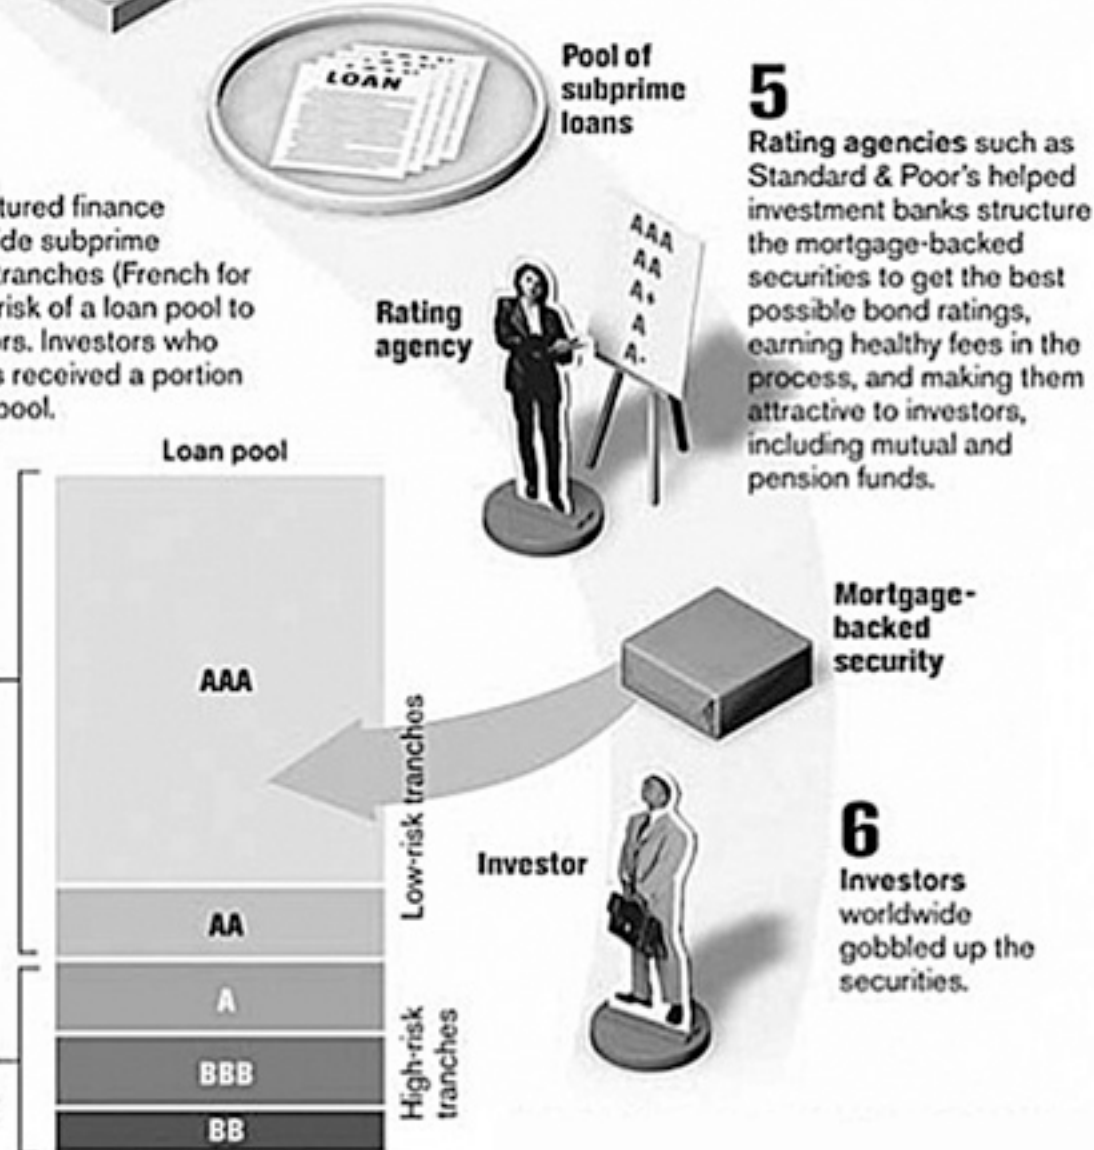

## Structured finance

A financial innovation called structured finance provided Wall Street a way to divide subprime mortgage-backed securities into tranches (French for slices.) The tranches allowed the risk of a loan pool to be parceled out to various investors. Investors who purchased bonds in the securities received a portion of the mortgage payments in the pool.

**Top-level tranches** contain the highest-quality, but lowest-paying, bonds. Even though a mortgage-backed security may be funded from a pool containing subprime loans, the top tranches can have investment-grade status of triple-A rated bonds because they are paid first from the pool.

**The lowest-level tranches** contain the riskiest, highest-paying bonds. They get a low rating and are paid off after the double- and triple-A rated bonds are paid.

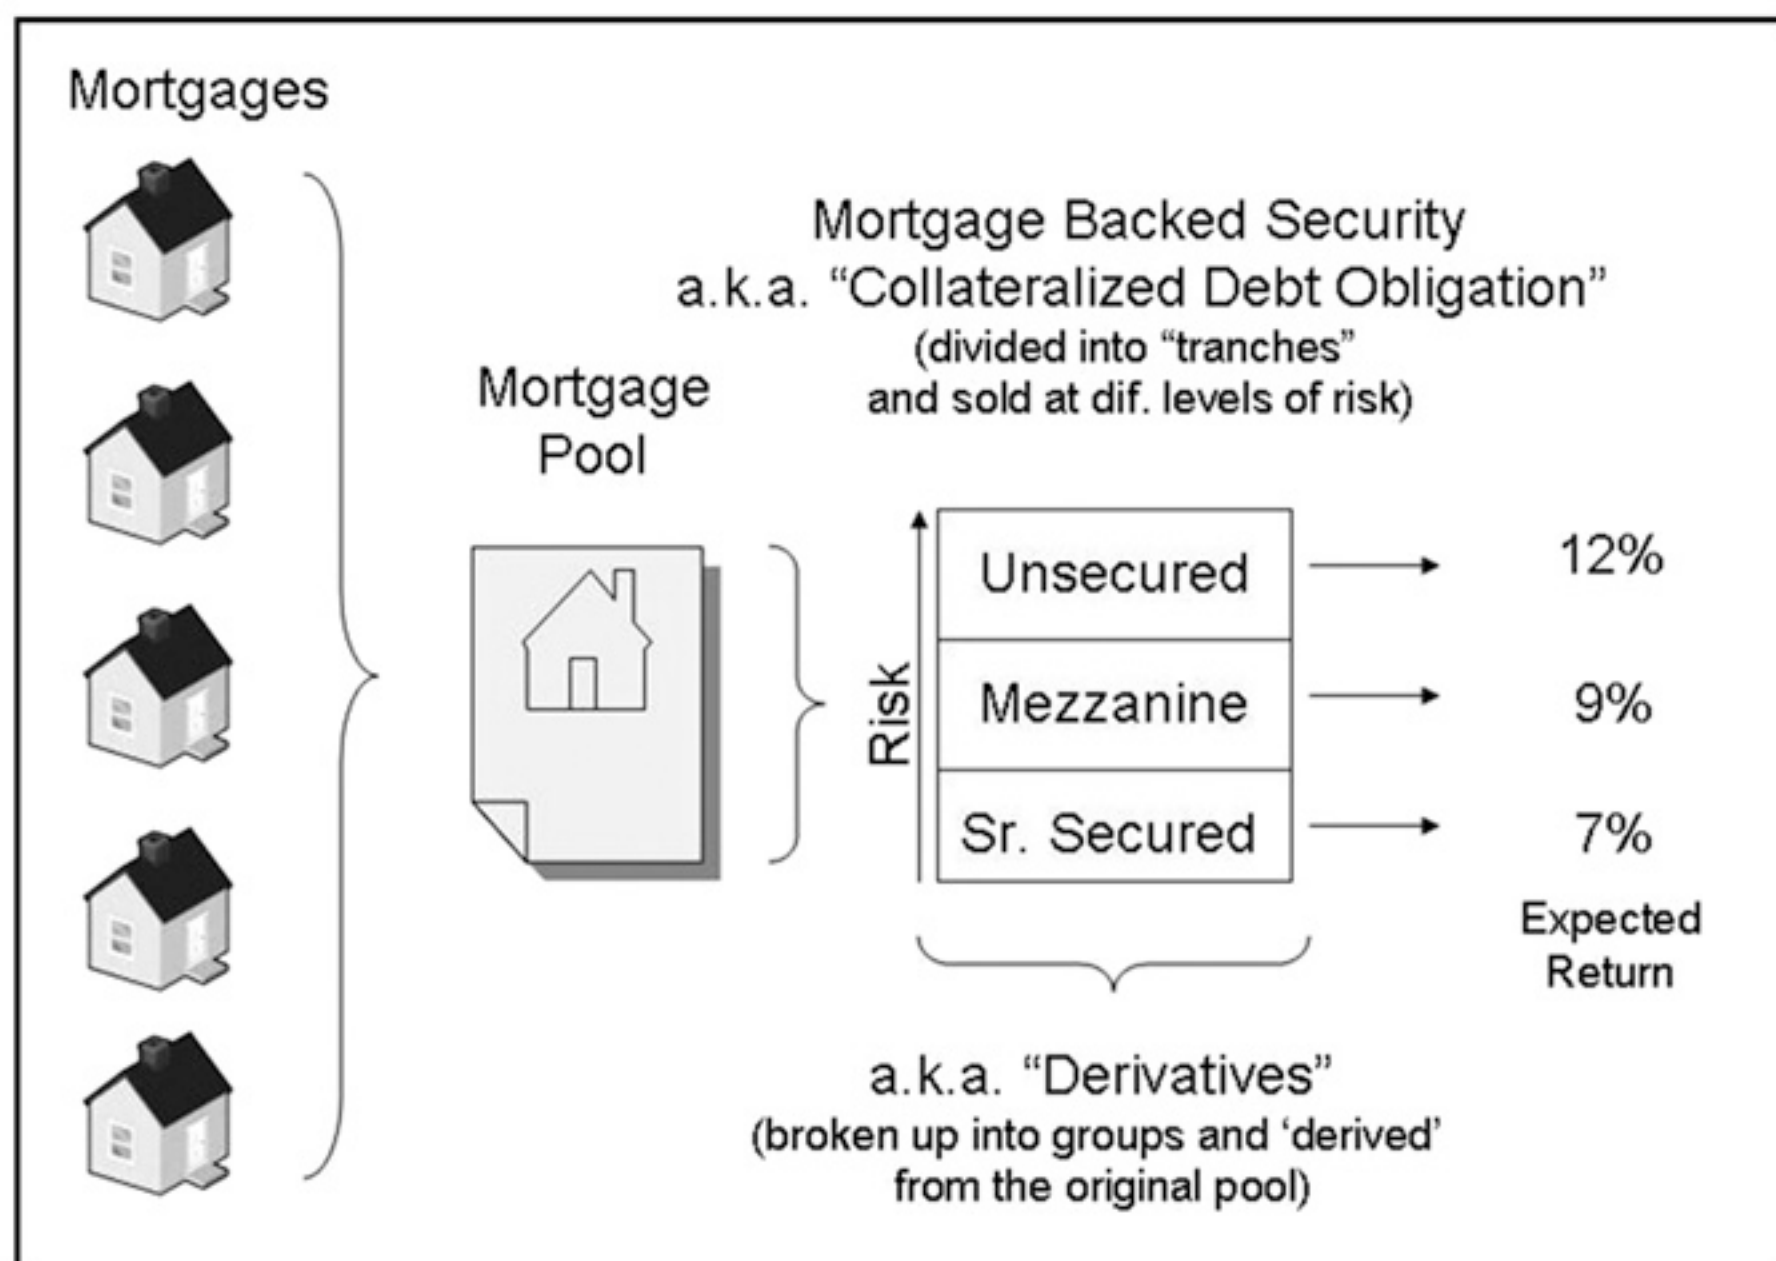

Many of you who already have my other four research books, have been questioning the Banks about the true nature of your loans, and received little response.

I'm going to look at another area of the mortgage process, which I haven't covered previously, and that is the sale of Mortgage Backed Securities, a process known as Securitisation.

Richard Kessler Esq. compares securitisation to buying a cow and selling hamburgers.

*"The people who buy hamburgers have paid for and are legally entitled to the hamburger but do not thereby become owners of or acquire an ownership interest in the cow. Securitization renders the mortgage note used to generate income unenforceable by eliminating the status of note holder."* Now you can see why the Banks don't answer.

Securitisation is the process whereby income-producing assets are pooled together to produce bond-like securities. Cash flows from the assets are directed to bondholders through a special purpose vehicle. The special purpose vehicle is legally separate to the originator of the assets, and is structured to remain unaffected in the event that the originator becomes bankrupt.

RMBS (Residential Mortgage-Backed Securitisation) is the most common form of securitisation. The first RMBS transaction was undertaken in 1977 by Bank of America, and consisted of a simple 'pass-through' structure. The asset class has evolved, however, and now investors can benefit from credit enhancement techniques such as subordination and over-collateralisation.

Okay...but who is the Holder of the Note and where is it? Does the Government know?

To answer that question, I have included a directive letter from the Treasurer of the Commonwealth, Mr Wayne Swan to the Australian Office of Financial Management.

## DIRECTION ON INVESTMENT IN RESIDENTIAL MORTGAGE-BACKED SECURITIES 2009

I, WAYNE MAXWELL SWAN, Treasurer of the Commonwealth, give this Direction under section 62A of the *Financial Management and Accountability Act 1997*. This Direction is to provide guidance to persons to whom I have delegated powers to invest under subsection 39(2) of the Act. Delegates are required to comply with this Direction, which is to be read in conjunction with my Directions of 3 February 2009 which were tabled in Parliament on 11 March 2009.

### Objectives

Over the past 15 years, the market for residential mortgage-backed securities (RMBS) has provided an important source of funding for new and smaller mortgage lenders to compete with the major banks. However, developments in international capital markets since mid-2007 have reduced liquidity in the RMBS market and constrained the ability of lenders to access funding from this source.

In view of these developments, on 3 October 2008 and on 16 October 2008 I directed the Australian Office of Financial Management (AOFM) to invest up to \$8 billion in Australian RMBS to support competition from a diverse range of lenders during the present market dislocation. To date, this initiative has assisted 13 lenders to raise almost \$11.4 billion in funding, with the AOFM investing in \$7.8 billion of RMBS.

However, the RMBS market remains dislocated and continues to be affected by the fallout from the global financial crisis. Pricing and volumes have not yet improved sufficiently to accommodate new issuance from a variety of smaller lenders.

I am now directing the AOFM to invest up to an additional \$8 billion in Australian RMBS and the remaining \$0.246 billion from my initial Directions, subject to market conditions. These investments aim to further support competition in residential mortgage lending from a diverse range of lenders.

Small businesses make an important contribution to national prosperity and to supporting jobs. As the economy recovers from the impact of the global financial crisis and global recession, it is important that small businesses continue to have access to competitive funding sources to support growth and investment in this sector. In light of this, an additional objective of these investments is to provide support for lending to small business, through participating lenders using some of the proceeds of the AOFM's investment for lending to small business.

### Directions

I direct that:

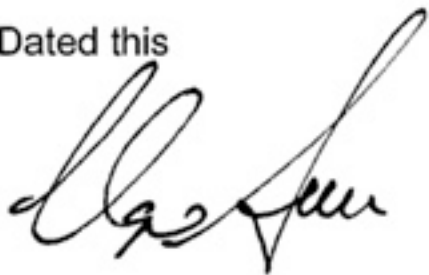

1. Delegates invest up to \$8.246 billion in Australian residential mortgage-backed securities rated AAA or equivalent by one of the major credit rating agencies.

2. The AOFM is to manage the investments in the residential mortgage-backed securities made under this Direction. The securities purchased under this Direction are to be held in a portfolio separate to the AOFM's cash and long-term debt portfolios. The performance of this portfolio will be evaluated separately.
3. The AOFM may enter into repurchase arrangements using residential mortgage backed securities purchased under this Direction, or other securities purchased under my Directions of 3 February 2009, for short term financing in its management of Official Public Account balances.
4. The AOFM may adjust its holdings of securities purchased under this Direction to take account of changes in their characteristics and credit quality or to provide better balance in its holdings of these securities.
5. After conditions in the primary residential mortgage-backed securities market have improved, securities purchased under this Direction may be realised or, at the AOFM's discretion, may continue to be held as part of its total investment portfolio, taking account of the objectives of this Direction and the expected return and risk on these securities in relation to the management objectives of its total portfolio. Sales of the securities should be undertaken without causing market volatility. Note that this direction does not limit directions 3 and 4.

In the event that an investment made in accordance with these Directions and my Directions of 3 October 2008 and 16 October 2008 ceases to meet the specified credit rating requirements, it may continue to be held to maturity or until it can be sold at an acceptable price.

Pursuant to paragraph 62A(5)(b) of the Act, I direct that delegates must comply with any instructions relating to administrative arrangements, procedures, limits, controls or other matters of detail relating to investment within the framework established by this Direction and my Directions of 3 February 2009, where those instructions are given in writing by the Secretary to the Treasury or by the Chief Executive Officer of the Australian Office of Financial Management.

Dated this *30th* day of *November* 2009

WAYNE MAXWELL SWAN  
Treasurer of the Commonwealth of Australia

Since the late 1980s, the securitisation of mortgages into residential mortgage-backed securities (RMBS) has provided an important source of funding for new and small mortgage lenders to compete with the major banks in lending for housing.

A mortgage-backed security is an asset-backed security or debt obligation that represents a claim on the cash flows from mortgage loans.

This is an area that you should really investigate if you are in default or have a court case pending with a foreclosure. Make sure to ask for the actual note, not a copy of it or an affidavit stating that they have the right to take action against you for collection.

# GLOBAL FINANCIAL CRISIS

## Housing finance rise beats expectations

By online business reporter Michael Janda

Updated 37 minutes ago

**Home loan approvals have risen by 1.9 per cent, the first increase in eight months.**

The Bureau of Statistics figures show there were 47,395 new owner-occupied housing loans approved in May, seasonally adjusted.

The median market economist forecast was for a rise of 1.5 per cent, according to a Reuters poll.

There was also a 2.6 per cent increase in the value of investment housing loans.

Overall, the value of new loan commitments rose 0.7 per cent, with the rise in the value of loans to investors offset by a fall in the value of loans to owner-occupiers.

There was a 4.7 per cent rise in the number of loans for the purchase of new dwellings, but there was a 2.2 per cent fall in the number of loans for constructing new dwellings.

Home lending increased for the first time in eight months during May (ABC News: Giulio Saggin, file photo)

When I see headlines like this one, which is obviously designed to try and boost the confidence of consumers and new home buyers, I can't help but feel that this data is generated as a direct result of intervention by the Treasurer and the OAFM.

Mortgage loans are purchased from banks, mortgage companies, and other originators then assembled into pools. This is done by government agencies, government sponsored enterprises, and private entities, which may offer features to mitigate the risk of default associated with these mortgages. These securities are usually sold as bonds, but there are a variety of securities that derive their ultimate value from mortgage pools.

On 26 September 2008 the Treasurer announced that the AOFM would begin purchasing residential mortgage backed securities (RMBS) to support competition in Australia's mortgage markets. Back then; the AOFM held two initial tenders for AAA rated RMBS, each of \$2 billion.

The Reserve Bank provides a facility to the Australian Government that is used to manage a group of bank accounts, known as the Official Public Account (OPA) Group.

The balance of this account represents the Government's daily cash position. From what I have researched into this area, I believe this is the record of your strawman's personal accounting. These records may be held at Iron Mountain.

Only two States, Queensland and New South Wales, currently have debt securities that are guaranteed by the Commonwealth.

Their domestic securities are held in Austraclear and they have some offshore securities in overseas depository systems operated by Clearstream and The Depository Trust Company.

These banking arrangements include the provision of a term-deposit facility for the investment of surplus funds, the "sweeping" of balances to and from agencies accounts held with transactional bankers, and access to a strictly limited overdraft facility. The Department of Finance and Deregulation manages this facility on behalf of the Australian Government.

The Reserve Bank also provides transactional banking facilities to various Australian Government agencies. The main transactional banking services offered by the Bank includes bank account facilities; deposit and cheque processing services; the processing and distribution of bulk electronic direct credit and direct debit transactions, including welfare, Medicare, salaries and vendor payments.

## US COURT CASES

In dismissing 14 foreclosure cases in 2007 based on a lack of proper documentation, a federal Judge in Ohio admonished the lenders, stating their argument that "*Judge, you just don't understand how things work'...reveals a condescending mindset and quasi-monopolistic system where financial institutions have traditionally controlled, and still control, the foreclosure process.*"

In the case of Landmark National Bank VS Boyd A Kesler in the Supreme Court of Kansas (No. 98,489) involving the Mortgage Electronic Registration System, the Missouri court found that, because MERS was not the original holder of the promissory note and because the record contained no evidence that the original holder of the note authorized MERS to transfer the note, the language of the assignment purporting to transfer the promissory note was ineffective.

The Judge stated that: "*MERS never held the promissory note, thus its assignment of the deed of trust had no force.*"

*"It lent no money and received no payments from the borrower. It suffered no direct, ascertainable monetary loss as a consequence of the litigation."*

When the mortgage servicers and securitizing banks that act as trustees of the securities fail to present proof that they own a mortgage, they sometimes file what's called a lost-note affidavit.

*"Judges in the US are becoming increasingly impatient with plaintiffs who produce no more proof of ownership than a lost-note affidavit"* said Michael Doan, an attorney at Doan Law Firm LLP in Carlsbad, Calif.

More than \$2.1 trillion, or 19 percent, of outstanding mortgages have been bundled into securities by private banks, according to Inside Mortgage Finance. Those loans may be sold several times before they land in a security.

Federal District Judge Christopher Boyko dismissed 14 foreclosure cases in Cleveland in November because of the inability of the trustee and the servicer to prove ownership of the mortgages.

Here is part of a transcript from a recent Court hearing involving a reversal of a Summary Judgement involving GMAC (General Motors Acceptance Corporation).

GMAC Mortgage LLC Plaintiff

v

DEBBIE VISICARO, et al. Defendant (s)

April 7, 2010

*THE COURT: "Okay, we're here today in GMAC versus Visicaro. This is a motion for rehearing the previously drafted motion for summary judgement."*

*THE COURT: "What's the Plaintiff's position regarding the motion at this time?"*

*MR FRASER: "I object... You've considered all the evidence before when you entered the summary judgment back in January of 2010. The opposing party then could not offer proof to support their position on any genuine and material facts. Right now, Your Honour, there are no convincing exigent, you know, circumstances being offered up at the time."*

*THE COURT: "Did you not read the motion? It sounds liker you're making a very generalized argument, and this is an, as I viewed it, extremely targeted motion which basically elaborates on the assertions that were raised at the time of the motion for summary judgment."*

*"As I recall that, counsel appeared on behalf of his clients, I think it was by phone and made arguments that the Court really gave short shrift to it, did not review the case."*

*"Since that time, for a number of reasons, the Court has delved further into it."*

*"I've had several events, which have occurred in cases which cause the Court to have great concern about the validity of fillings in our mortgage foreclosure cases, and that precipitated my re-evaluation of the evidentiary considerations."*

*"I'll give you an example of that. I have one case that was called up for summary judgment hearing, and I thought it was going to be the typical granted situation, and then a lawyer showed up for the defendant homeowner."*

*"I was beginning to recite to the lawyer what I had typically recited, that there was no affidavits in opposition. And the lawyer said, "Well, I thought you might be interested in this," and handed me some documents which were out of another file in our circuit, and it turned out, it was the same note and mortgage that was in a separate and independent file."*

*"There was a different plaintiff pursuing a foreclosure proceeding on the same note and mortgage as the one that was being proceeded on. Both of the cases contained allegations in the original complaints that the separate plaintiffs were owners and holders of the note. Both of them had gone so far to have affidavits filed in support of a summary judgment whereby an individual represented to the court in the affidavit that the separate plaintiffs had possessed the note and had lost the note while it was in their possession."*

*"Interestingly, both affidavits, although they were different plaintiffs, purported the same facts and they were executed by the same individual in alleged capacity as a director of two separate corporations, one of which was ultimately found to me to be an assignee of the original note."*

*"So that really increased my interest in this subject matter, because I really honestly don't have any confidence that any of the documents the Courts are receiving on these mass foreclosures are valid."*

*"Hearsay statements on the matter would not be admissible into evidence and could not be relied upon to create an issue of summary judgement"*

Honourable Anthony Rondolino

## THE AUSTRALIAN CONNECTION

### **Australian Custodial Services Association**

The Australian Custodial Services Association Limited ("ACSA") is the peak industry body representing members of Australia's custodial and investment administration sector.

Its mission is to contribute to innovation within Australia's investment administration infrastructure, support the development of custody professionals, and to provide leadership in representing our members. By maintaining leadership and serving as a hub of quality and influential information, ACSA enables members to confidently navigate change and growth.

ACSA represents members holding securities in excess of \$1.3 trillion in custody and under administration, and who employ more than 3000 staff.

ACSA members include ANZ, CITIGROUP, HSBC, JP MORGAN, THE BANK OF NEW YORK MELLON, ERNST & YOUNG, S.W.I.F.T and STANDARD AND POOR'S.

You can begin to see the complexity and fragility of the derivatives and securities markets, along with currency swaps, hedge funds, tranches, long term notes and other instruments based on speculation that the average person including myself knows very little about.

It's no wonder that Fannie May and Freddie Mac went under in the collapse last year, as they were two of the biggest players that dealt with this type of securities trading. It is all essentially a bet, based on fictional ones and zeroes on computers somewhere.

Another company called BlackRock controls over \$3 Trillion in Securities. A quick look at a few of the people who work there and you can see the inter-connectivity between governments, banks and large corporations.

## LEGAL VS LAWFUL

I would like to make something very clear to you right now in regard to the concept of "legal". I have come to comprehend that whenever the term "Legal" is applied to something, it often has the effect of no longer being lawful, or even criminal. I came to this conclusion after being told by a Telstra Shop representative, (when asking where my \$130 of credit had vanished to), that it was "legal stealing".

LEGAL is not the same as LAWFUL, NOT LEGAL is not the same as ILLEGAL, NOT LEGAL usually means LAWFUL, ILLEGAL is not the same as UNLAWFUL.

So when someone says that a document is NOT LEGAL, it probably means that it is perfectly LAWFUL (it exists in the real world, and has not yet passed through the legal process into the world of fictional entities, paper corporations and statutes etc).

## WORLD GOVERNMENT OF WORLD CITIZENS

In 1949, Garry Davis founded the International Registry of World Citizens. Over 750,000 individuals in 150 countries registered. On 4 September, 1953, from the Town Hall of Ellsworth, Maine, he declared the founding of the World Government of World Citizens based on fundamental human right, calling for recognition from both individuals and other governments.

The World Government of World Citizens had passed beyond being merely an idealistic concept incorporated by one human. It has in fact become operational.

To date over 2,500,000 WSA passports, WG ID cards and birth certificates have been issued. Over 150 countries have recognized the passport on a de- facto basis.

I have been sceptical about the true nature of this World Government and World Services organisation, as having read the story of how it was created; you could easily be fooled into thinking that this is the best thing to ever happen on Earth.

There are some admirable and inspiring stories and philosophies to be read on the official website, but when I discovered that their head office is located within the satanic five-pointed pentagram close to the Whitehouse in Washington DC, I became very suspicious. The logo looks more to me like a man locked inside the bars of a prison planet, or perhaps blissfully ignorant and unaware, like a mouse thinking it is free to go wherever it likes within the confines of its cage.

Symbolism is everything to the NWO and to the secret societies and elite that claim rulership over this planet and the people on it. Therefore when I noticed the location of the head office sits on the right shoulder of the pentagram, I immediately thought of the references I gave in Book Three about the Eagle looking over it's right shoulder, and meaning for the State, not for the people.

### PRIVATE CLAIMS

 <p><b>Parking Collection Services Pty Ltd</b> A.B.N. 53 106 841 865</p>	<p><b>This is NOT an Expiation Notice or Parking Fine</b></p> <p>You have breached the Terms and Conditions of Use. <p><b>POST billpay</b> Billpay Code: 2825 Ref: _____</p>	
<p><b>PAYMENT OPTIONS</b></p> <p><b>AUSTRALIA POST OFFICE or AGENCY</b>          Pay in person at any post office,          Phone 13 18 16          or go to <a href="http://www.postbillpay.com.au">www.postbillpay.com.au</a></p> <p>Other payment options and information on reverse side of notice.</p>	

Have a close look at this parking ticket. On first inspection, you could be fooled into thinking that this is a council fine. The dark writing on the edge and the back however states that it is not an expiation notice or parking fine. So what is it?

This is an example of a private company issuing a Notice of Claim (civil) and hoping you will pay it without thinking about it.

## UPDATES AND NEW INFO

I spend a lot of time searching Google Earth for interesting things and anomalies, and I find the layout of Babylon to be intriguing.

Here you can see three enormous man made pyramid style mounds with spiral roads ascending them, each in an anti-clockwise direction.

The ruins of the ancient city of Babylon sits in the lower left corner, inside the triangle formed by the mounds. (the lines have been added in Photoshop)

It appears as though the roads are designed to be another representation of a serpent, as seen in many places, such as the serpent mound. Both Chris Everard and David Icke have detailed books and documentaries about the origins of mankind and the “gods” of the sky, and for anyone who is interested I would recommend researching the Anunnaki and Nephilim, as well as Sumerian and Babylonian mythology, such as the Epic of Gilgamesh.

From what I have researched and seen, almost every culture has a history of sky gods, serpent beings, and Adam and Eve stories, which include descriptions of genetic engineering of humans with the gods. It might be of interest to you to explore the origins of these stories to and also provide some background to who is really controlling this world from behind the scenes.

## TALK ABOUT GIANTS

There's been much discussion and passing around of images purportedly showing giant skeletons and skulls. I can report to you with confidence that not one of the images we have examined with our team is genuine. We are fortunate to have had a good friend and Photoshop expert who can analyse all the images at pixel level, and I will include two examples of the hoaxes here.

This is probably the most well-known and circulated giant skeleton hoax, and was created as part of a university archaeology project. My apologies for the resolution of these, but they are Internet images, and not ones I have shot personally as with most of the images in this book.

It is also an example of very bad Photoshop work, with blank grey areas behind the man with the shovel (who is the same man as the one in the image) and also next to man in the bottom right. There is also blurring, resolution differences and leftover pixel artefacts where care has not been taken to completely clean up the image.

We managed to locate the two original images that were used for this composite, one of which is a photo of a normal size skeleton from a museum. You can see now how the two were merged together. Every one of the skull or skeleton photos we've examined so far have turned out to be faked.

## 9/11 ANOMALIES

There are many unanswered questions about the events of September 11, and I've done a lot of looking at all the evidence. What I'd like to include here are a few items you might not have seen or be aware of.

For researching past events I travel back in time using the Wayback Machine, or Internet Archive. A few years ago I decided to take a look at what was going on at the websites of some of the most important players involved with 9/11.

What I found, was that most or all of the archived data prior to September 2001 had been removed or deleted, as you can see above.

For example the CIA's archive mysteriously ends in October 2001 and doesn't continue again until March 2002. FEMA's archive is completely missing for 2001. The FAA's archive has been wiped clean before 2002, the same goes for NORAD.

I have seen recently released amateur video of the rear of the mysterious Building 7 collapse, which clearly shows explosives going off on every floor simultaneously, blowing out windows from the inside. It fell at freefall speed and was not hit by any planes.

Building 7 was brought down by controlled demolition, or "pulled", which is a term used by demolition experts. Larry Silverstein, the man who would benefit greatly from the destruction of the WTC site made this admission:

*"I remember getting a call from the fire department commander, telling me that they were not sure they were gonna be able to contain the fire, and I said, "We've had such terrible loss of life, maybe the smartest thing to do is pull it." And they made that decision to pull and we watched the building collapse."*

I'm theorising that it might have been used as the control or command centre for the operation, as it was home to the US Secret Service, the Internal Revenue Service, the Mayor's Office of Emergency Management and the US SEC. Whatever the motive, it's collapse was certainly one of the most suspicious events of that day.

## AMERICA UNDER ATTACK

### Bush promises punishment

"Thousands of lives were suddenly ended," President Bush told the nation Tuesday after terrorist attacks brought down the World Trade Center's twin towers and damaged the Pentagon. Bush promised to "find those responsible and bring them to justice."

I found this webpage in the CNN archive, and under World Scene it shows an interesting statement from the Taliban which says "Afghanistan feels your pain". Obviously the media must have overlooked that headline and focused on Bush's larger print statement above.

These next 5 frames represent five seconds of film, which shows one of the remaining undamaged sections of steel turning to dust and blowing away in the wind. How?

Those columns are enormous and yet we see them disintegrating in a few seconds.

Questions have been raised about what these guys are doing with this bucket of tiny fragments in the middle of all this massive debris?

What could be so important in there?

The mysterious burnt out and melted cars. This is really one of the strangest anomalies of the whole event.

Most of these vehicles have no tyres and look like they have been hit by some sort of heat weapon. They were found miles away from the WTC underneath a bridge. There were hundreds of these found in and around New York City including a whole parking lot full of them situated quite some distance from the World trade Centre.

Some of them have no engine blocks, and almost all of them rusted instantly. What kind of energy or chemical could cause this kind of destruction so far away from the towers? Were there particles of Thermite suspended in the ash clouds that literally ate through these cars?

Last but not least were the mysterious trucks that were seen bringing tonnes of dirt into the WTC site in the days following the collapse. Was this to try to cover up evidence such as the exposed steel columns that were seen sliced off at 45 degree angles (from explosive cutting charges) or perhaps to contain the pools of superheated molten steel that were found in the rubble, possibly from the use of Thermite? I have a great deal of respect for the 9/11 Truth Movement and recommend that you watch the documentaries Loose Change, Zero, Aftermath 9/11 and Mysteries of Demolition.

## THE PENTAGON MISSILE ATTACK

This is the hole supposedly made by a passenger jet crashing into the Pentagon. When I first saw these images, I thought, there's just no way that a plane did this.

I recently watched a video on Youtube which appears to show a ground level missile with no wings hitting the building, and have been looking for supporting evidence.

The thing that intrigues me, is that there were a number of large trailers parked outside that area. If indeed it was a missile attack, perhaps it could have been launched from a stationary device such as this. It could then just be easily driven away.

After careful examination of the frames of this film, it is obvious that the thin white streak shown by the arrow does not have any wings, is traveling very fast at ground level, and appears to originate from the Whitehouse grounds near the freeway.

Here it has just exploded, and if you look carefully back on the angle the object has traveled, there appears to be something large, such as a trailer parked on the same angle (bottom right of frame). Could it have been something like this?

# EXTREME PREJUDICE

The Terrifying Story of the Patriot Act  
And the Cover Ups of 9/11 and Iraq

*The Ultimate Conspiracy  
to Silence Truth*

**BY SUSAN LINDAUER**

For those of you interested in the conspiracy facts behind 911, I highly recommend Susan Lindauer's book "Extreme Prejudice" which outlines her involvement as a CIA asset, and what she knew before the event.

# THE RIGHT TO TRAVEL

## A BILL TO BE ENTITLED AN ACT

1 To amend Title 40 of the Official Code of Georgia Annotated, relating to motor vehicles and  
2 traffic, so as to repeal Chapter 5, relating to drivers' licenses; provide for a short title; to  
3 report the findings of the General Assembly regarding the constitutionality of certain laws  
4 relating to drivers' licenses; to provide for an effective date; to repeal conflicting laws; and  
5 for other purposes.

6 BE IT ENACTED BY THE GENERAL ASSEMBLY OF GEORGIA:

### 7 SECTION 1.

8 This Act shall be known and may be cited as the "Right to Travel Act."

### 9 SECTION 2.

10 The General Assembly finds that:

11 (1) Free people have a common law and constitutional right to travel on the roads and  
12 highways that are provided by their government for that purpose. Licensing of drivers  
13 cannot be required of free people because taking on the restrictions of a license requires  
14 the surrender of an inalienable right;

15 (2) In England in 1215, the right to travel was enshrined in Article 42 of Magna Carta:  
16 It shall be lawful to any person, for the future, to go out of our kingdom, and to return,  
17 safely and securely, by land or by water, saving his allegiance to us, unless it be in time  
18 of war, for some short space, for the common good of the kingdom: excepting prisoners  
19 and outlaws, according to the laws of the land, and of the people of the nation at war  
20 against us, and Merchants who shall be treated as it is said above.

21 (3) Where rights secured by the Constitution of the United States and the State of  
22 Georgia are involved, there can be no rule making or legislation that would abrogate  
23 these rights. The claim and exercise of a constitutional right cannot be converted into a  
24 crime. There can be no sanction or penalty imposed upon an individual because of this  
25 exercise of constitutional rights;

26 (4) American citizens have the inalienable right to use the roads and highways  
27 unrestricted in any manner so long as they are not damaging or violating property or  
28 rights of others. The government, by requiring the people to obtain drivers' licenses, is  
29 restricting, and therefore violating, the people's common law and constitutional right to  
30 travel;

31 (5) In *Shapiro v Thompson*, 394 U.S. 618 (1969), Justice Potter Stewart noted in a  
32 concurring opinion that the right to travel "is a right broadly assertable against private  
33 interference as well as governmental action. Like the right of association...it is a virtually  
34 unconditional personal right, guaranteed by the Constitution to us all." The Articles of  
35 Confederation had an explicit right to travel; and we hold that the right to travel is so  
36 fundamental that the Framers thought it was unnecessary to include it in the Constitution  
37 or the Bill of Rights;

38 (6) The right to travel upon the public highways is not a mere privilege which may be  
39 permitted or prohibited at will but the common right which every citizen has under his  
40 or her right to life, liberty, and the pursuit of happiness. Under this constitutional  
41 guarantee one may, therefore, under normal conditions, travel at his or her inclination  
42 along the public highways or in public places while conducting himself or herself in an  
43 orderly and decent manner; and

44 (7) Thus, the legislature does not have the power to abrogate the citizens' right to travel  
45 upon the public roads by passing legislation forcing the citizen to waive the right and  
46 convert that right into a privilege.

47 **SECTION 3.**

48 Title 40 of the Official Code of Georgia Annotated, relating to motor vehicles and traffic, is  
49 amended by repealing Chapter 5, relating to drivers' licenses, and designating said chapter  
50 as reserved.

51 **SECTION 4.**

52 This Act shall become effective upon its approval by the Governor or upon its becoming law  
53 without such approval.

54 **SECTION 5.**

55 All laws and parts of laws in conflict with this Act are repealed.

## ENDNOTE

There is just so much I could put into these books, it's difficult to briefly touch on a few topics, as one of them alone could fill it's own book, but at least the information is accessible to people who have no knowledge of any of it.

I've met people who have never heard of WACO, the NWO, the STRAWMAN or any of the topics I've covered. I've also met people who have never heard of The Beatles.

Before I close this book, I would like to mention something which I call "Learning to Time Travel."

I believe that in the 1970's, consciousness was close to breaking out of its confinements and people were exploring everything from free love to psychedelic audio/visual displays. Analogue synthesisers, mind-altering drugs and acid trips along with peace rallies were the norm.

I grew up in the 1970's and my fondest memories as a child are between 1978 and 1982. I recall it being a time of feeling free and alive, and I wanted to re-capture that feeling and bring it into the now. To do that, I have spent a great deal of time finding all the toys, images, posters, music, clothes, electronic games, bicycles, TV shows and whatever other piece of popular culture or visual/audio trigger I could recall.

The room that I have set up as my office has the same 1970's wood panelling walls, and I have a selection of audio cassette tapes that I play through an old tape deck. There are original 1970's matchbox cars on a shelf, an old Korg Synthesiser, model kits, vinyl records from artists such as Tangerine Dream, Klaus Schulze and all the late 70's early 80's artists. I use old incandescent lighting, not fluoro or other modern lights, as it's much warmer. I don't listen to MP3's, only analogue music through analogue systems. Digital is harsh, square wave, without harmonics. It is not natural and does not interface with human sine wave frequencies. It is an assault system on our senses to de-tune us, and cut us off from the natural world.

By doing all this, I have really felt a sense of joy and creativity return, along with a profound sense of freedom, as though I have travelled back in time to a period when I had no personal knowledge or experience of things such as taxes, police, government, restrictions, wars, violence, mortgages, rent, income, registration or courts.

As I explained in the first part of this book, it's all about what you focus upon, and if surrounding myself with these things generates a sense of freedom and happiness, then that excludes the thought of, and therefore the fear and manifestation of, all the negative aspects of creation.

THOMAS ANDERSON

## FAMOUS QUOTES

*"The issue which has swept down the centuries and which will have to be fought sooner or later is the people versus the banks."*

**Lord Acton**

*"I care not what puppet is placed on the throne of England to rule the Empire, the man that controls Britain's money supply controls the British Empire. And I control the money supply."*

**Baron Nathan Mayer Rothschild**

*"Banking was conceived in iniquity and was born in sin. The Bankers own the earth. Take it away from them, but leave them the power to create deposits, and with the flick of the pen they will create enough deposits to buy it back again. However, take it away from them, and all the great fortunes like mine will disappear and they ought to disappear, for this would be a happier and better world to live in. But, if you wish to remain the slaves of Bankers and pay the cost of your own slavery, let them continue to create deposits."*

**Sir Josiah Stamp**

*"We shall have World Government, whether or not we like it. The only question is whether World Government will be achieved by conquest or consent."*

**James Paul Warburg**

*"Give me control of a nation's money and I care not who makes the laws."*

**Rothschild**

*"The Rothschild's, and that class of money-lenders of whom they are the representatives and agents - men who never think of lending a shilling to their next-door neighbours, for purposes of honest industry, unless upon the most ample security, and at the highest rate of interest - stand ready, at all times, to lend money in unlimited amounts to those robbers and murderers, who call themselves governments, to be expended in shooting down those who do not submit quietly to being robbed and enslaved."*

**Lysander Spooner**

THE END
